A startup and SME progress factory

From idea to Product Market Fit

CONCREE SAS
Dakar | Abidjan

About

CONCREE is an Entrepreneur Support organization that delivers incubation/acceleration services and digital technologies to **help startups make progress** in regard to their specific context.

Our mission

We believe in entrepreneurship as a mean of expressing one's **freedom**, **social advancement** and **solving social, economic and environmental** problems. Our credo is to provide the **tools, methodology and digital technology** necessary to initiate entrepreneurial initiatives around the world, particularly in Africa.

Our history

How we got here

« Our 8 years history is made of grit, patience, resilience, passion and adaptation. We failed two times but still found a unique driving force to figure out the best sustainable model possible. We are what we are today thanks to our talented team and clients/partners that know our history and trust our capacity to deliver quality services and products, always focused on how to help entrepreneurs make progress ».

Our founders: Abdoul SY & Babacar BIRANE

The launch

Following up a successful crowdfunding campaign, we completed the funding necessary to the launch of the company from Senegal. We built the online incubation platform and ran a pilot with 15 startups.

The « Aha » Moment

After having experienced difficulties to start our business in Senegal, as young professionals residing in France, due to lack of information, solid team and opportunities to get technical and financial support, we decided to build an online incubator to help solve the problem.

First pivot

Although we were having good results in supporting entrepreneurs, we were experiencing business model instability. In our quest finding the solution, organizations such as the Friedrich Naumann Foundation showed up and proposed to pay for selected entrepreneurs to receive our training and incubation services.

Confirmation

We start to early signs of PMF with customers like GIZ, Positive Planet, Enabel, AFD, Espresso Telecom, International Trade Center, French Institute, Goethe Institute, etc. ordering our couple of services: incubation and lezgo. Our team also grew from 5 to 13 members within the same year.

Early growth

The year we decided to scale our organization and support system starting from Côte d'Ivoire. As part of our growth strategy, we built the first ever open-incubation digital platform that aims at supporting 1 000 000 entrepreneurs in Africa by 2030.

2021

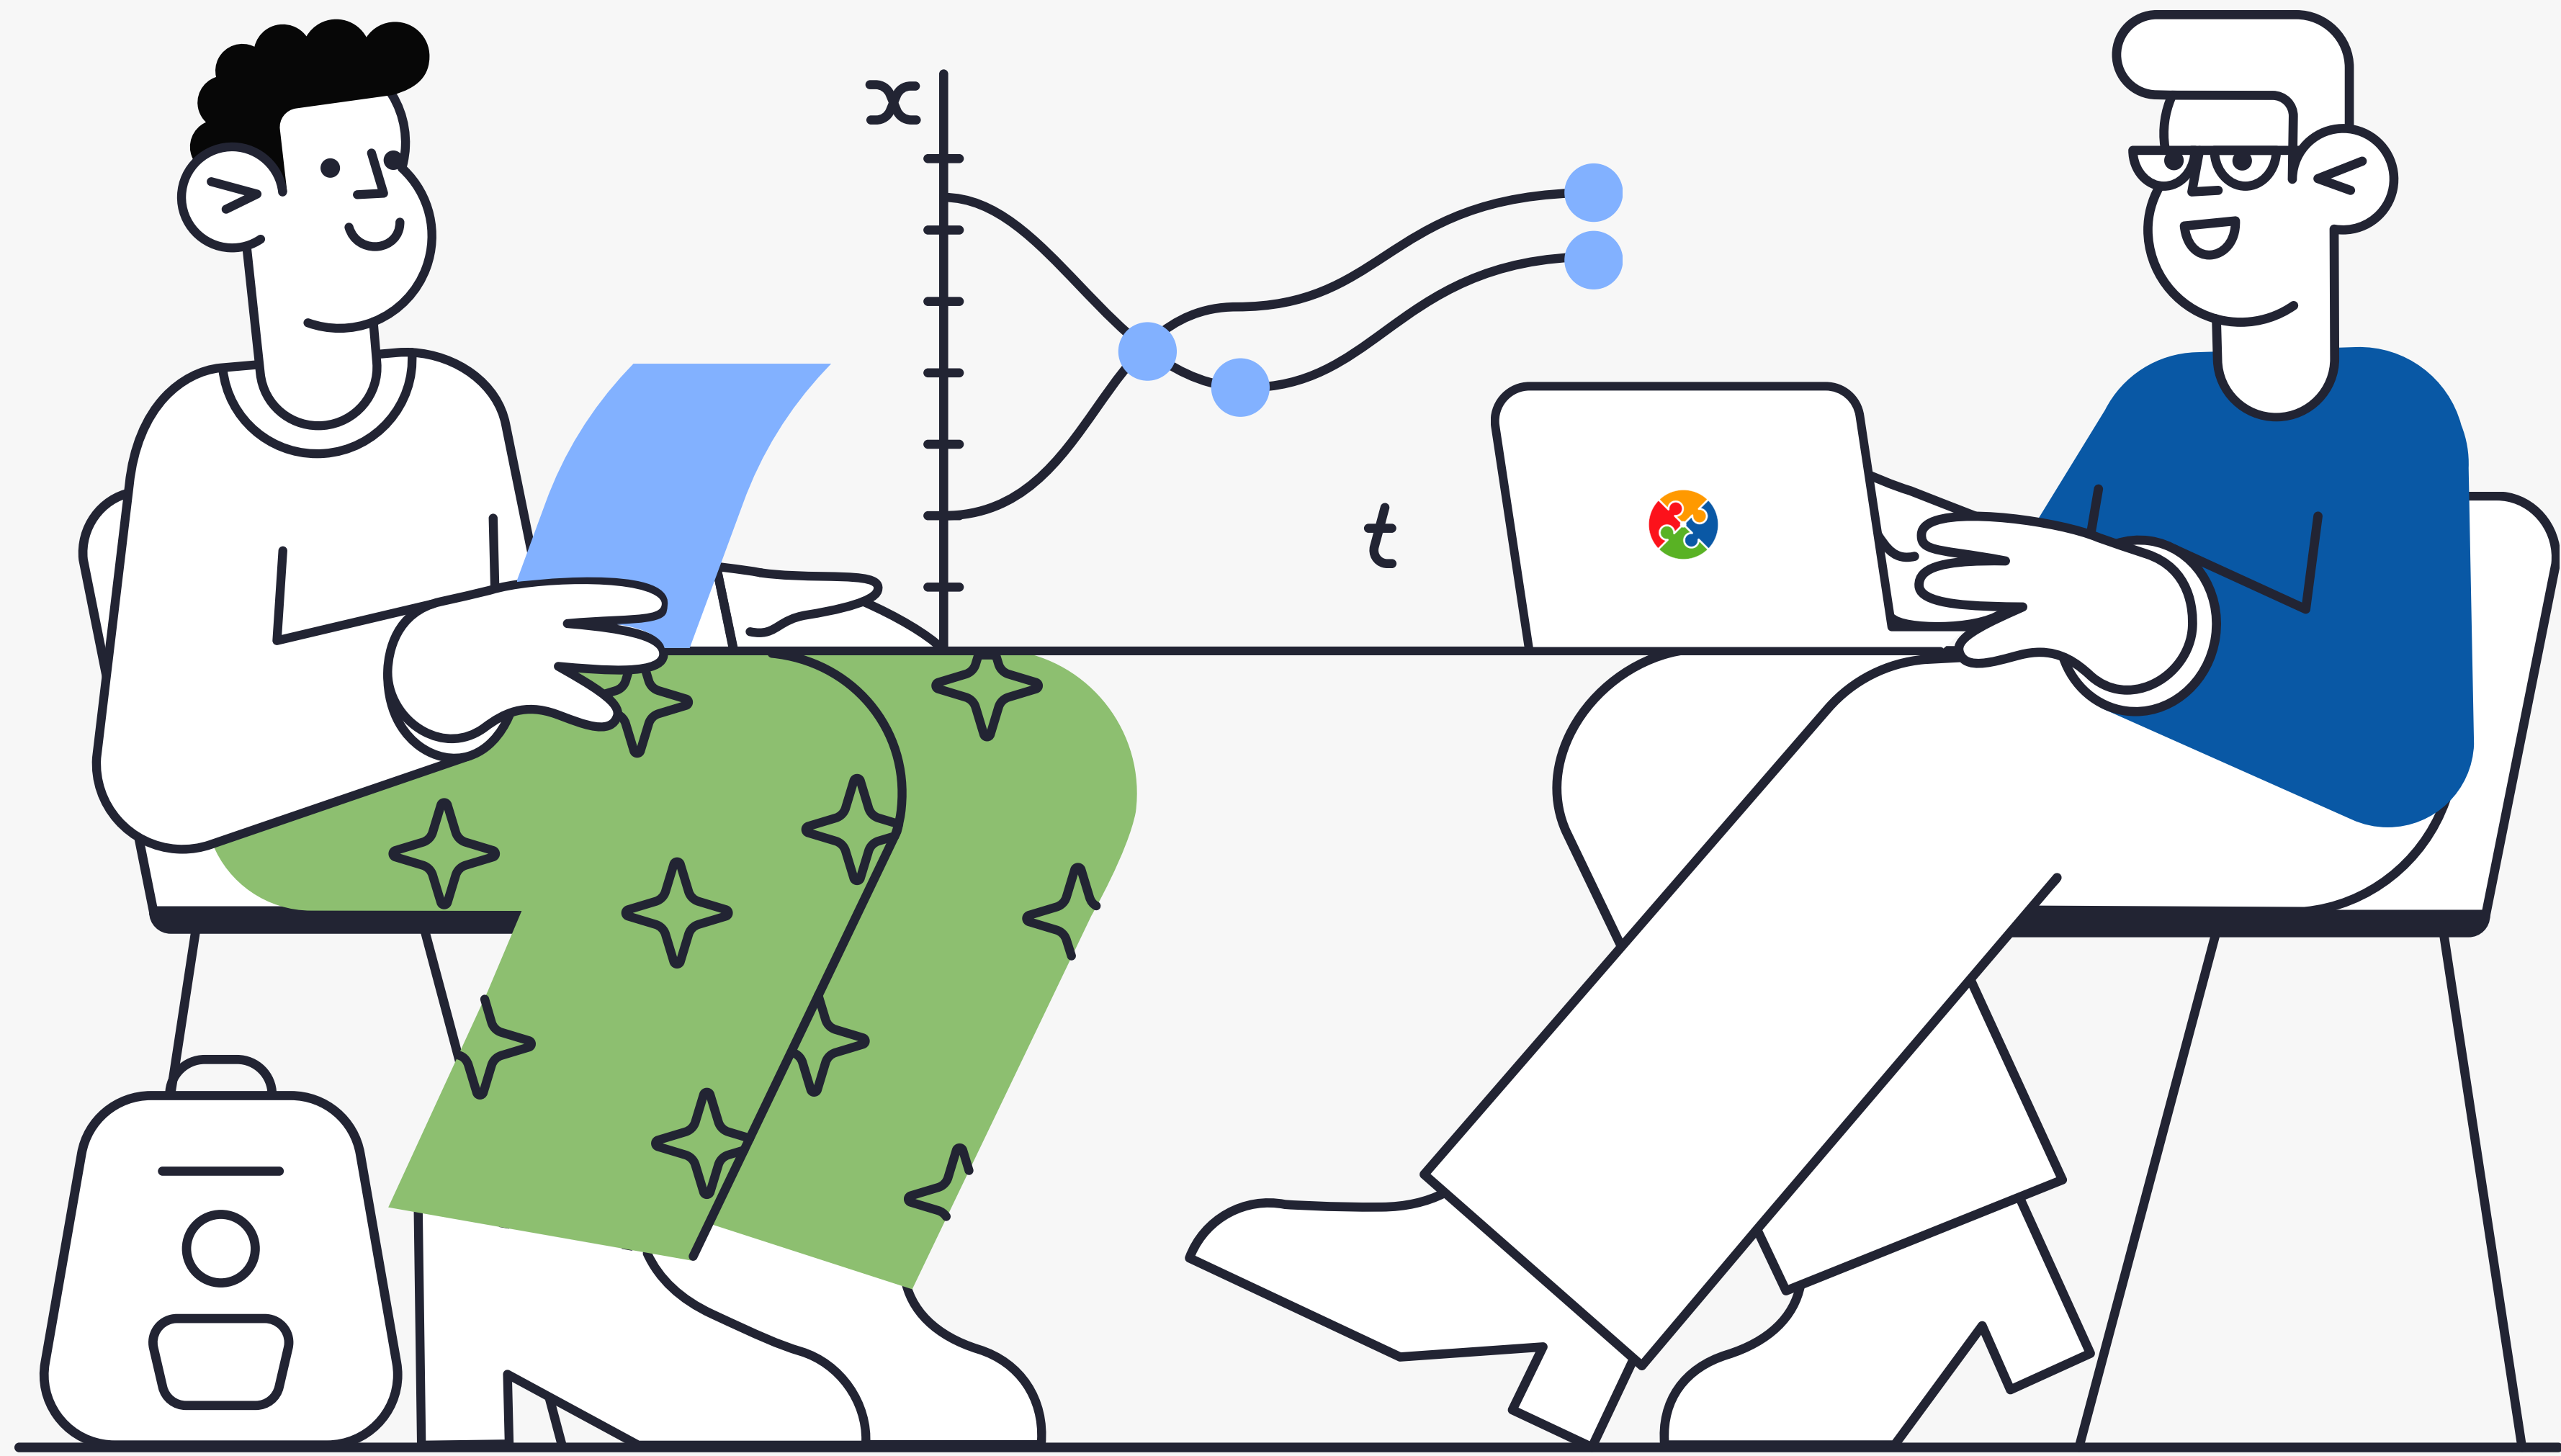

The LezGo moment

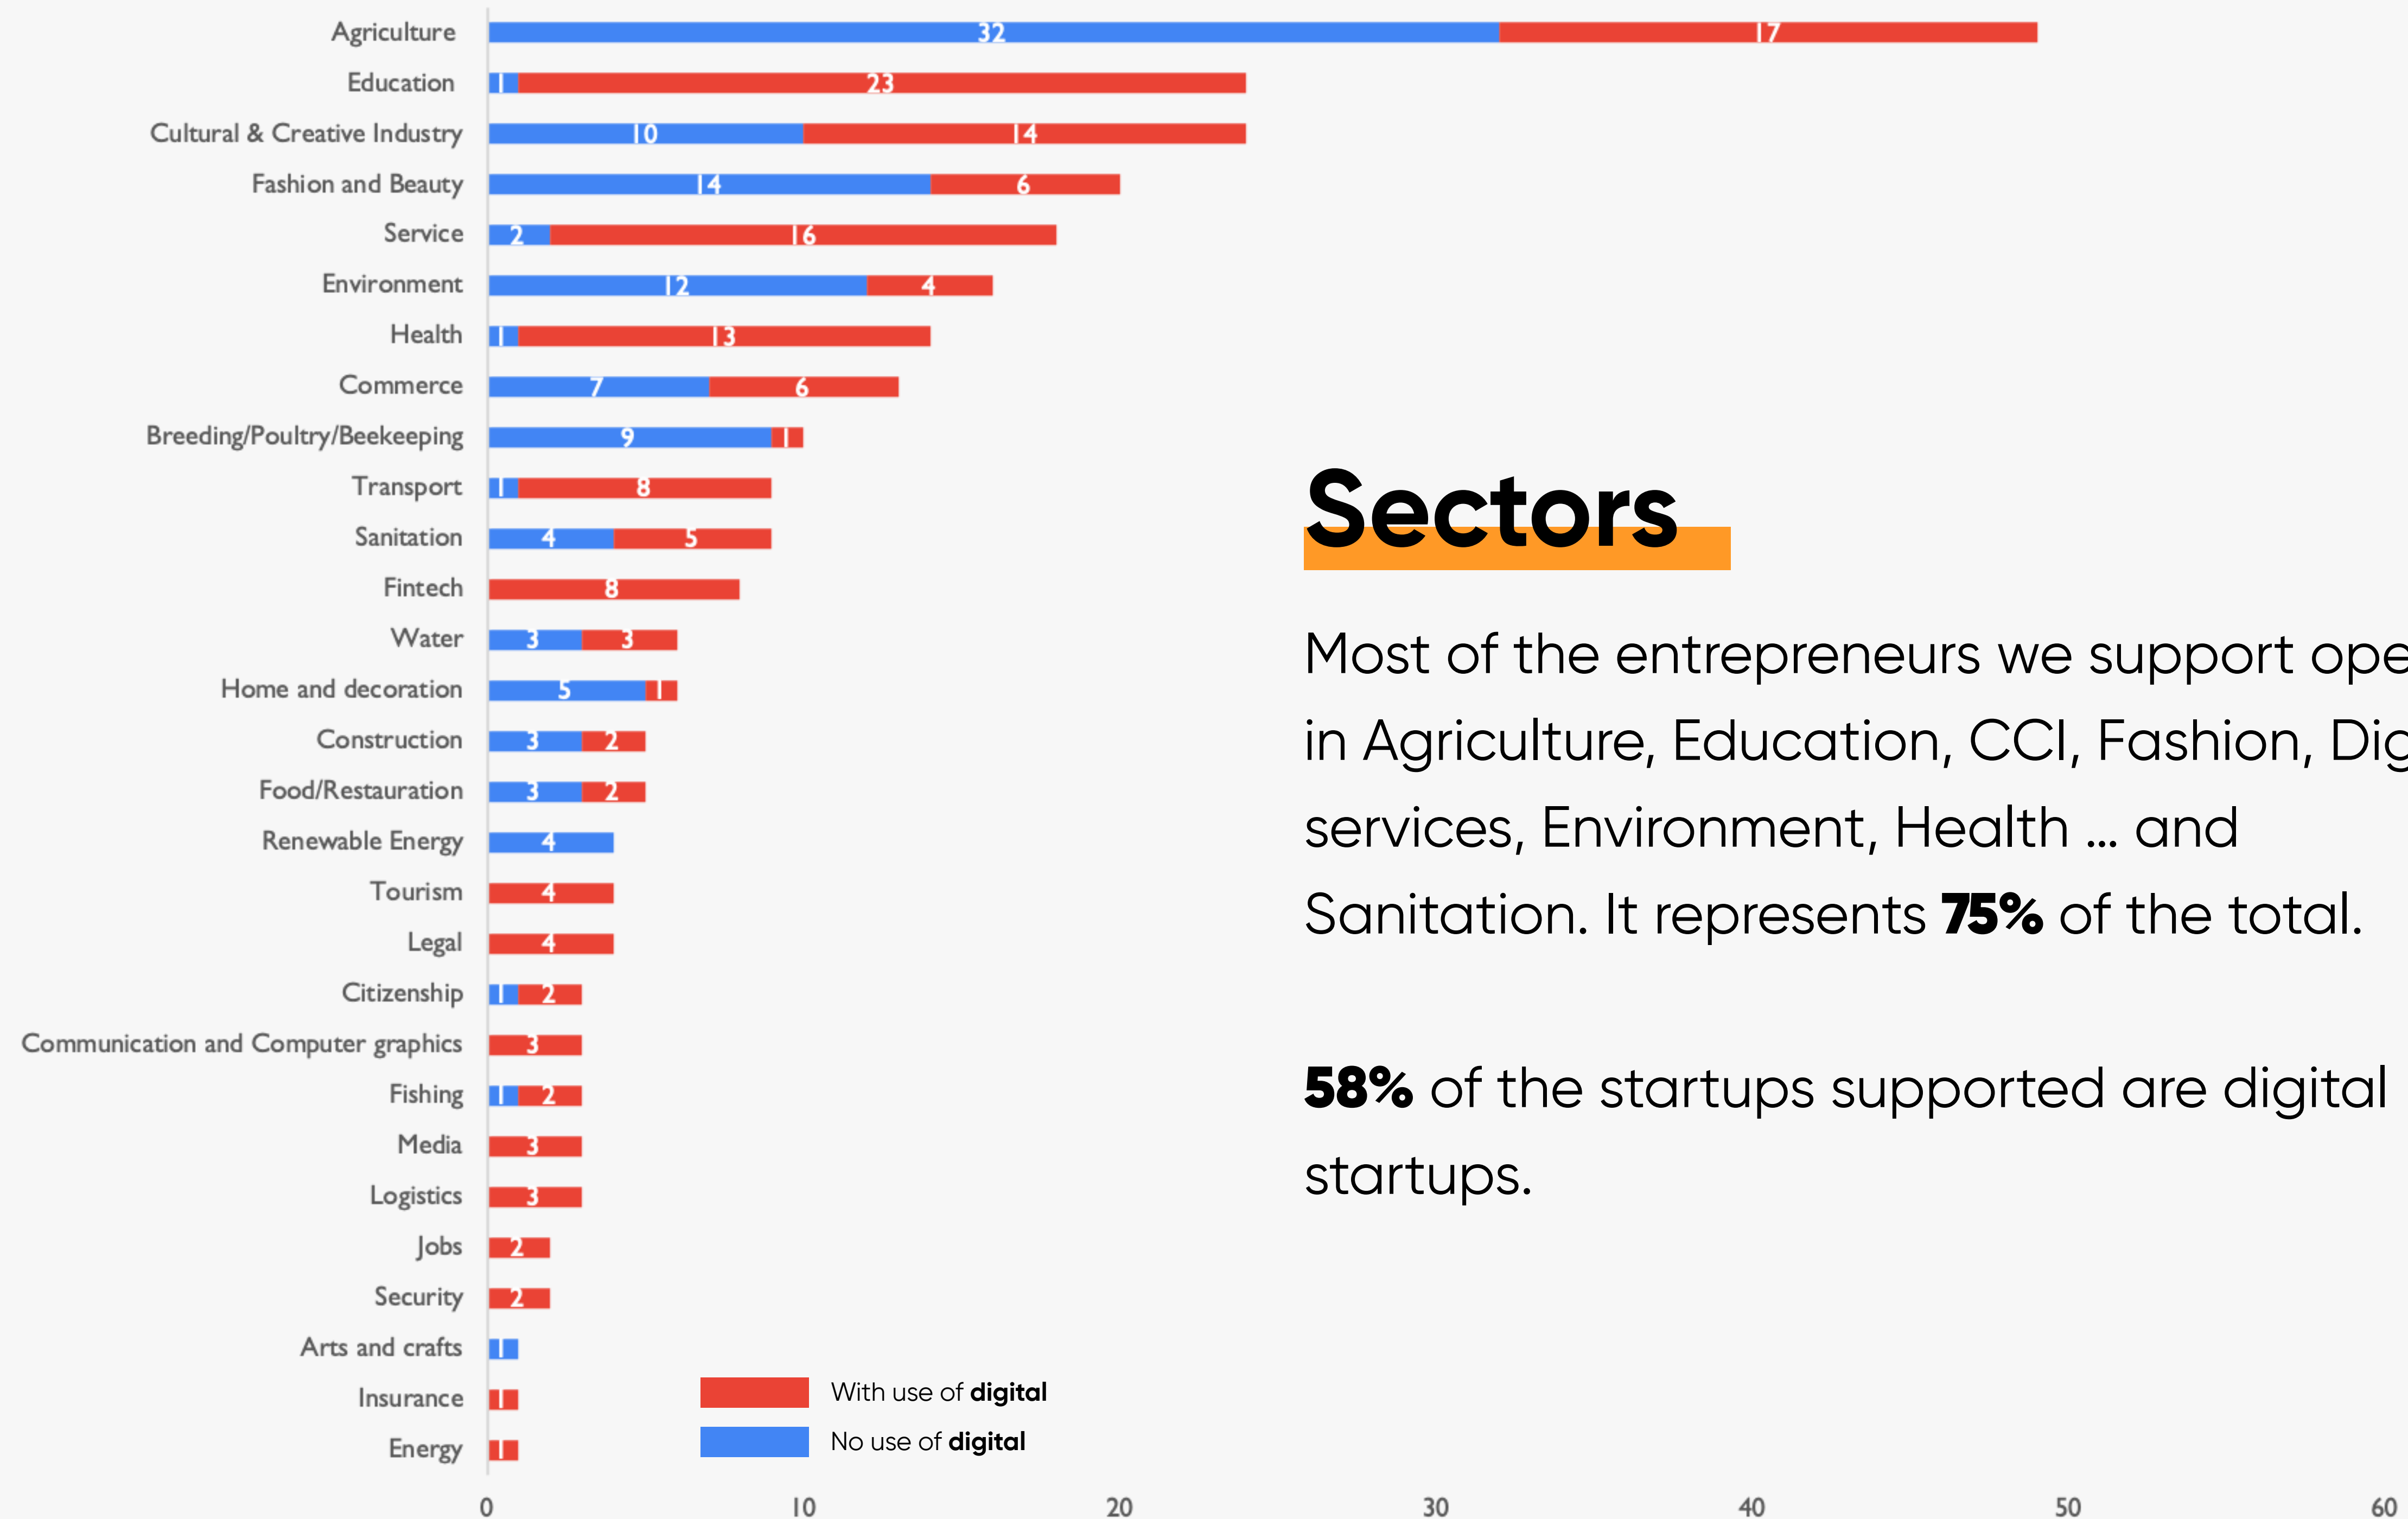

On a trip to the US, two serial entrepreneurs founders of a startup mentoring organization discovered the online incubation platform we built 3 years ago and ask us to build the same to help them scale their organization in the state of Nevada. We seized the opportunity and launched a new product, lezgo (www.lezgo.io).

Product Market Fit

3/4 of our customers decided to pursue their collaboration with CONCREE plus new customers coming in. In order to keep delivering quality support services, we worked on a methodological system that rely on a progress matrix, after 2 years of R&D.

Our Numbers

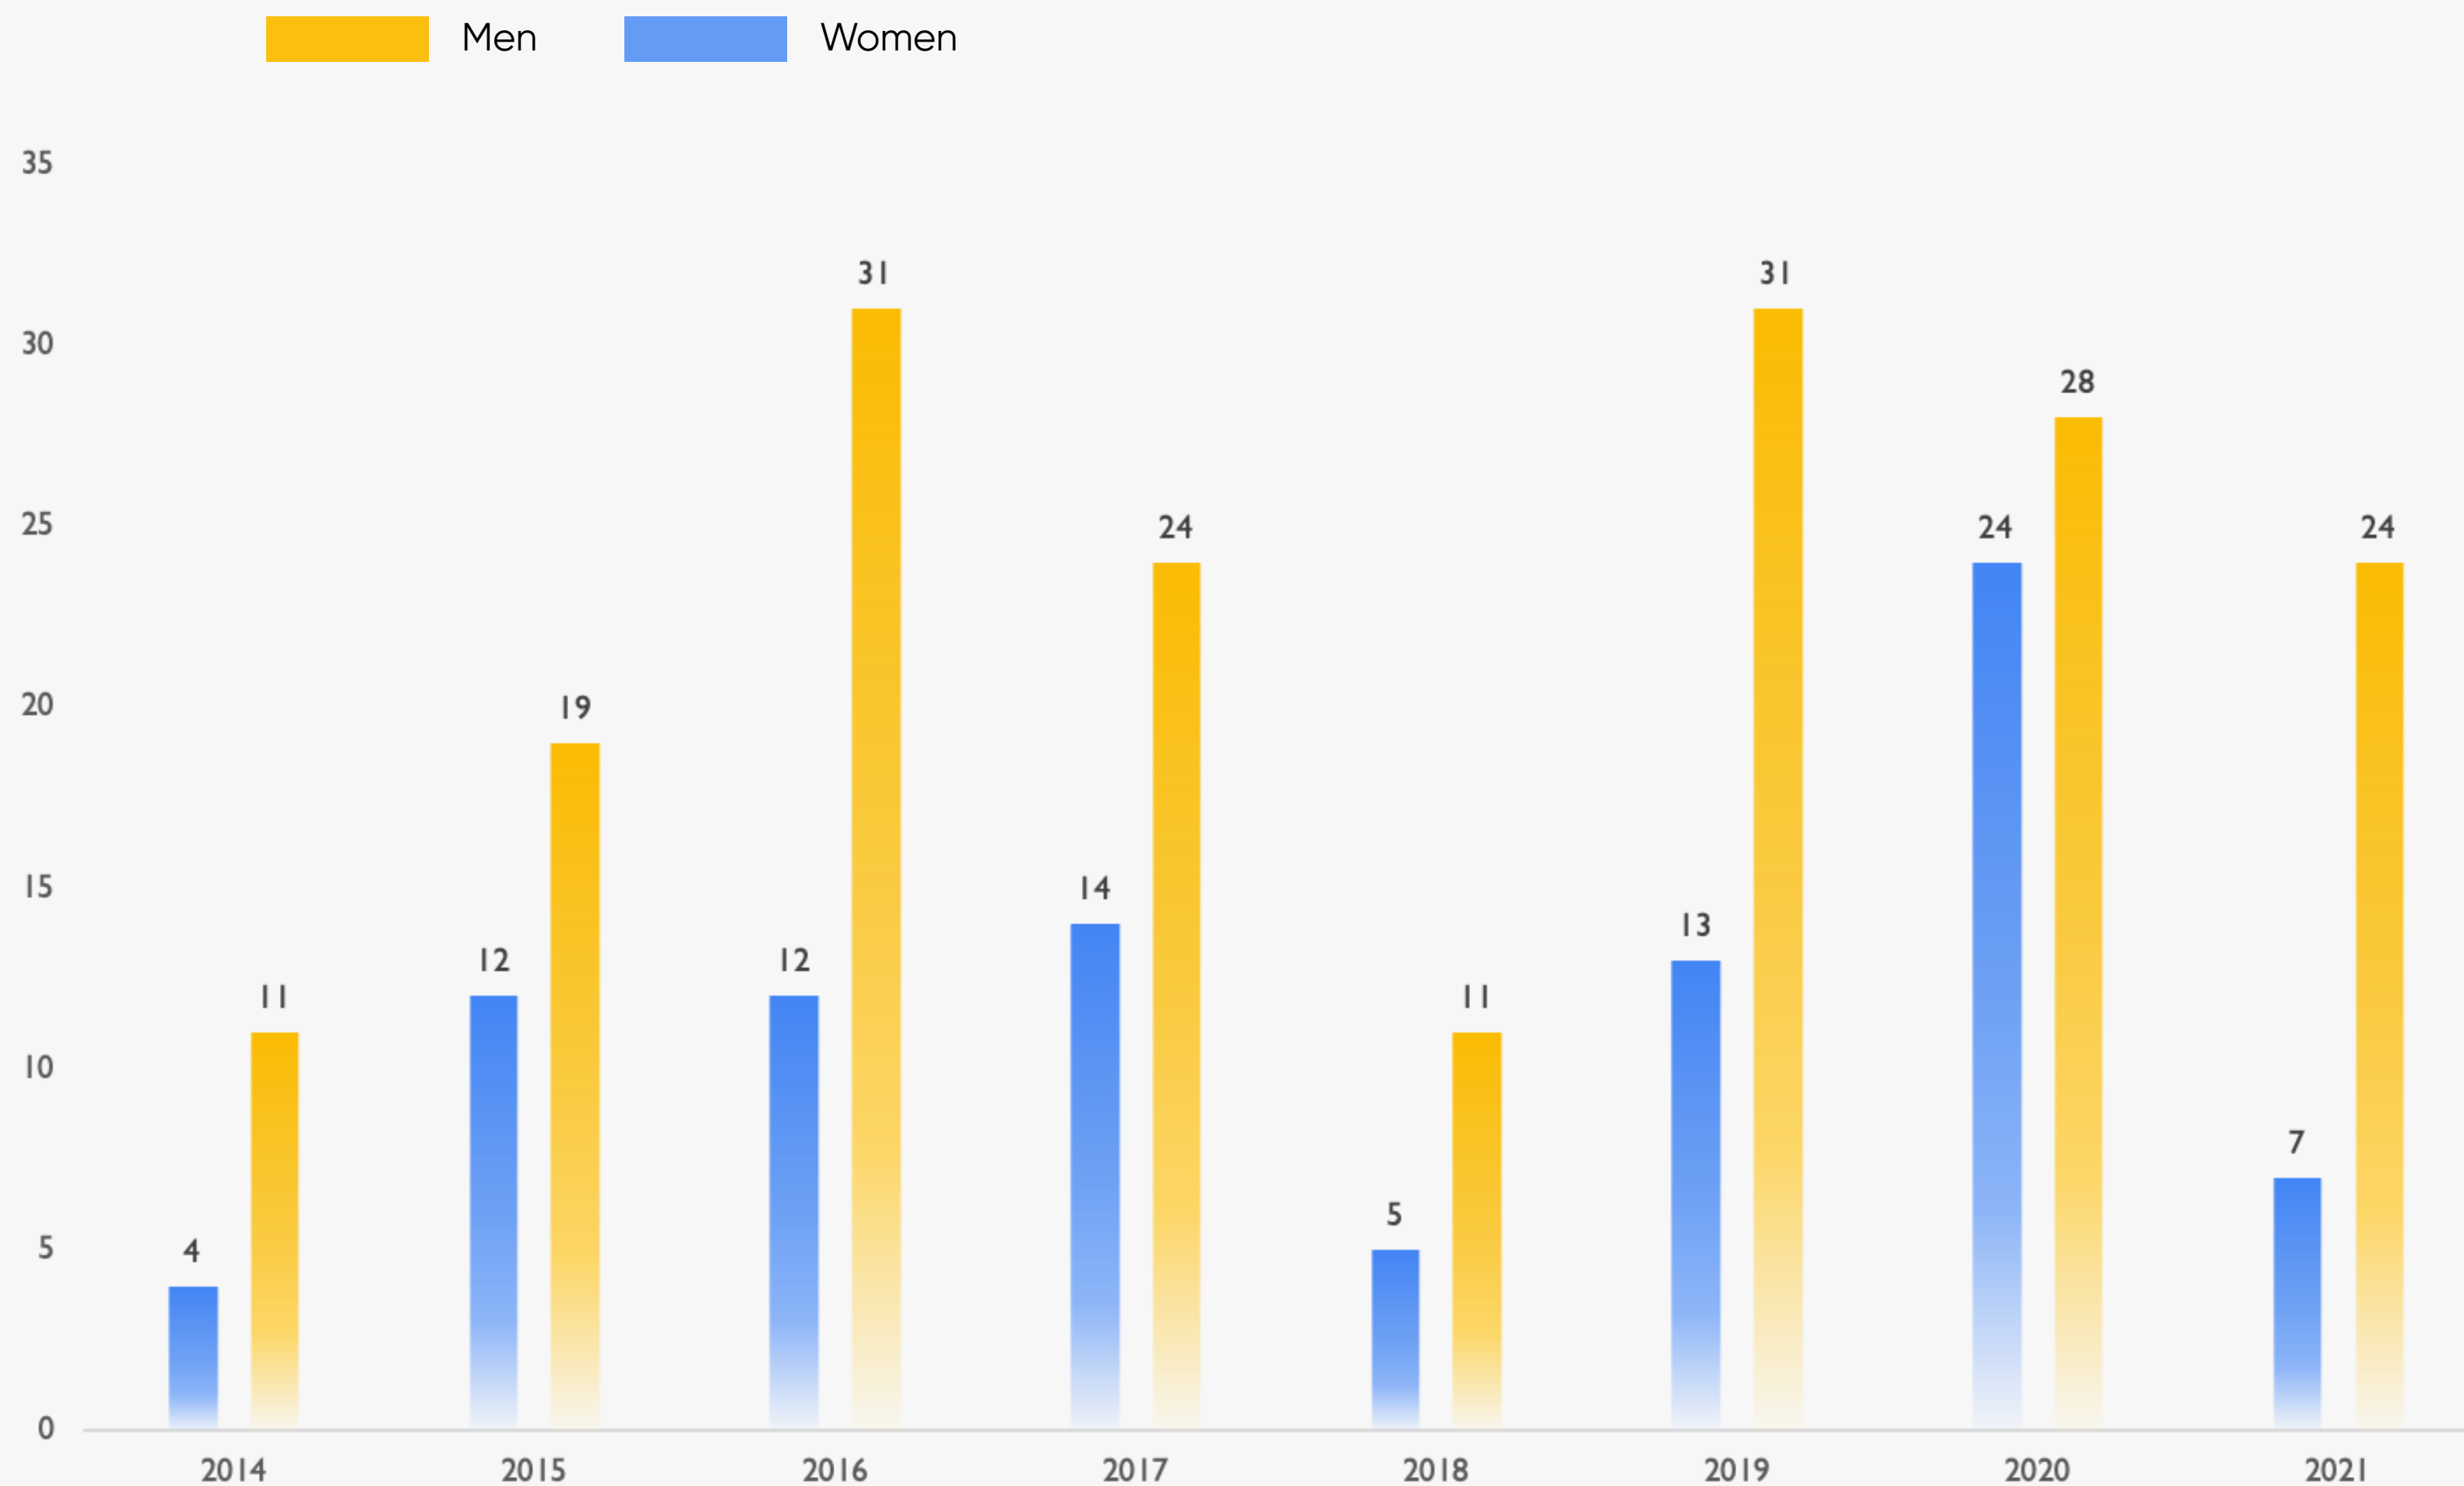

Sectors

Most of the entrepreneurs we support operate in Agriculture, Education, CCI, Fashion, Digital services, Environment, Health ... and Sanitation. It represents **75%** of the total.

58% of the startups supported are digital startups.

Number of entrepreneurs & Gender composition

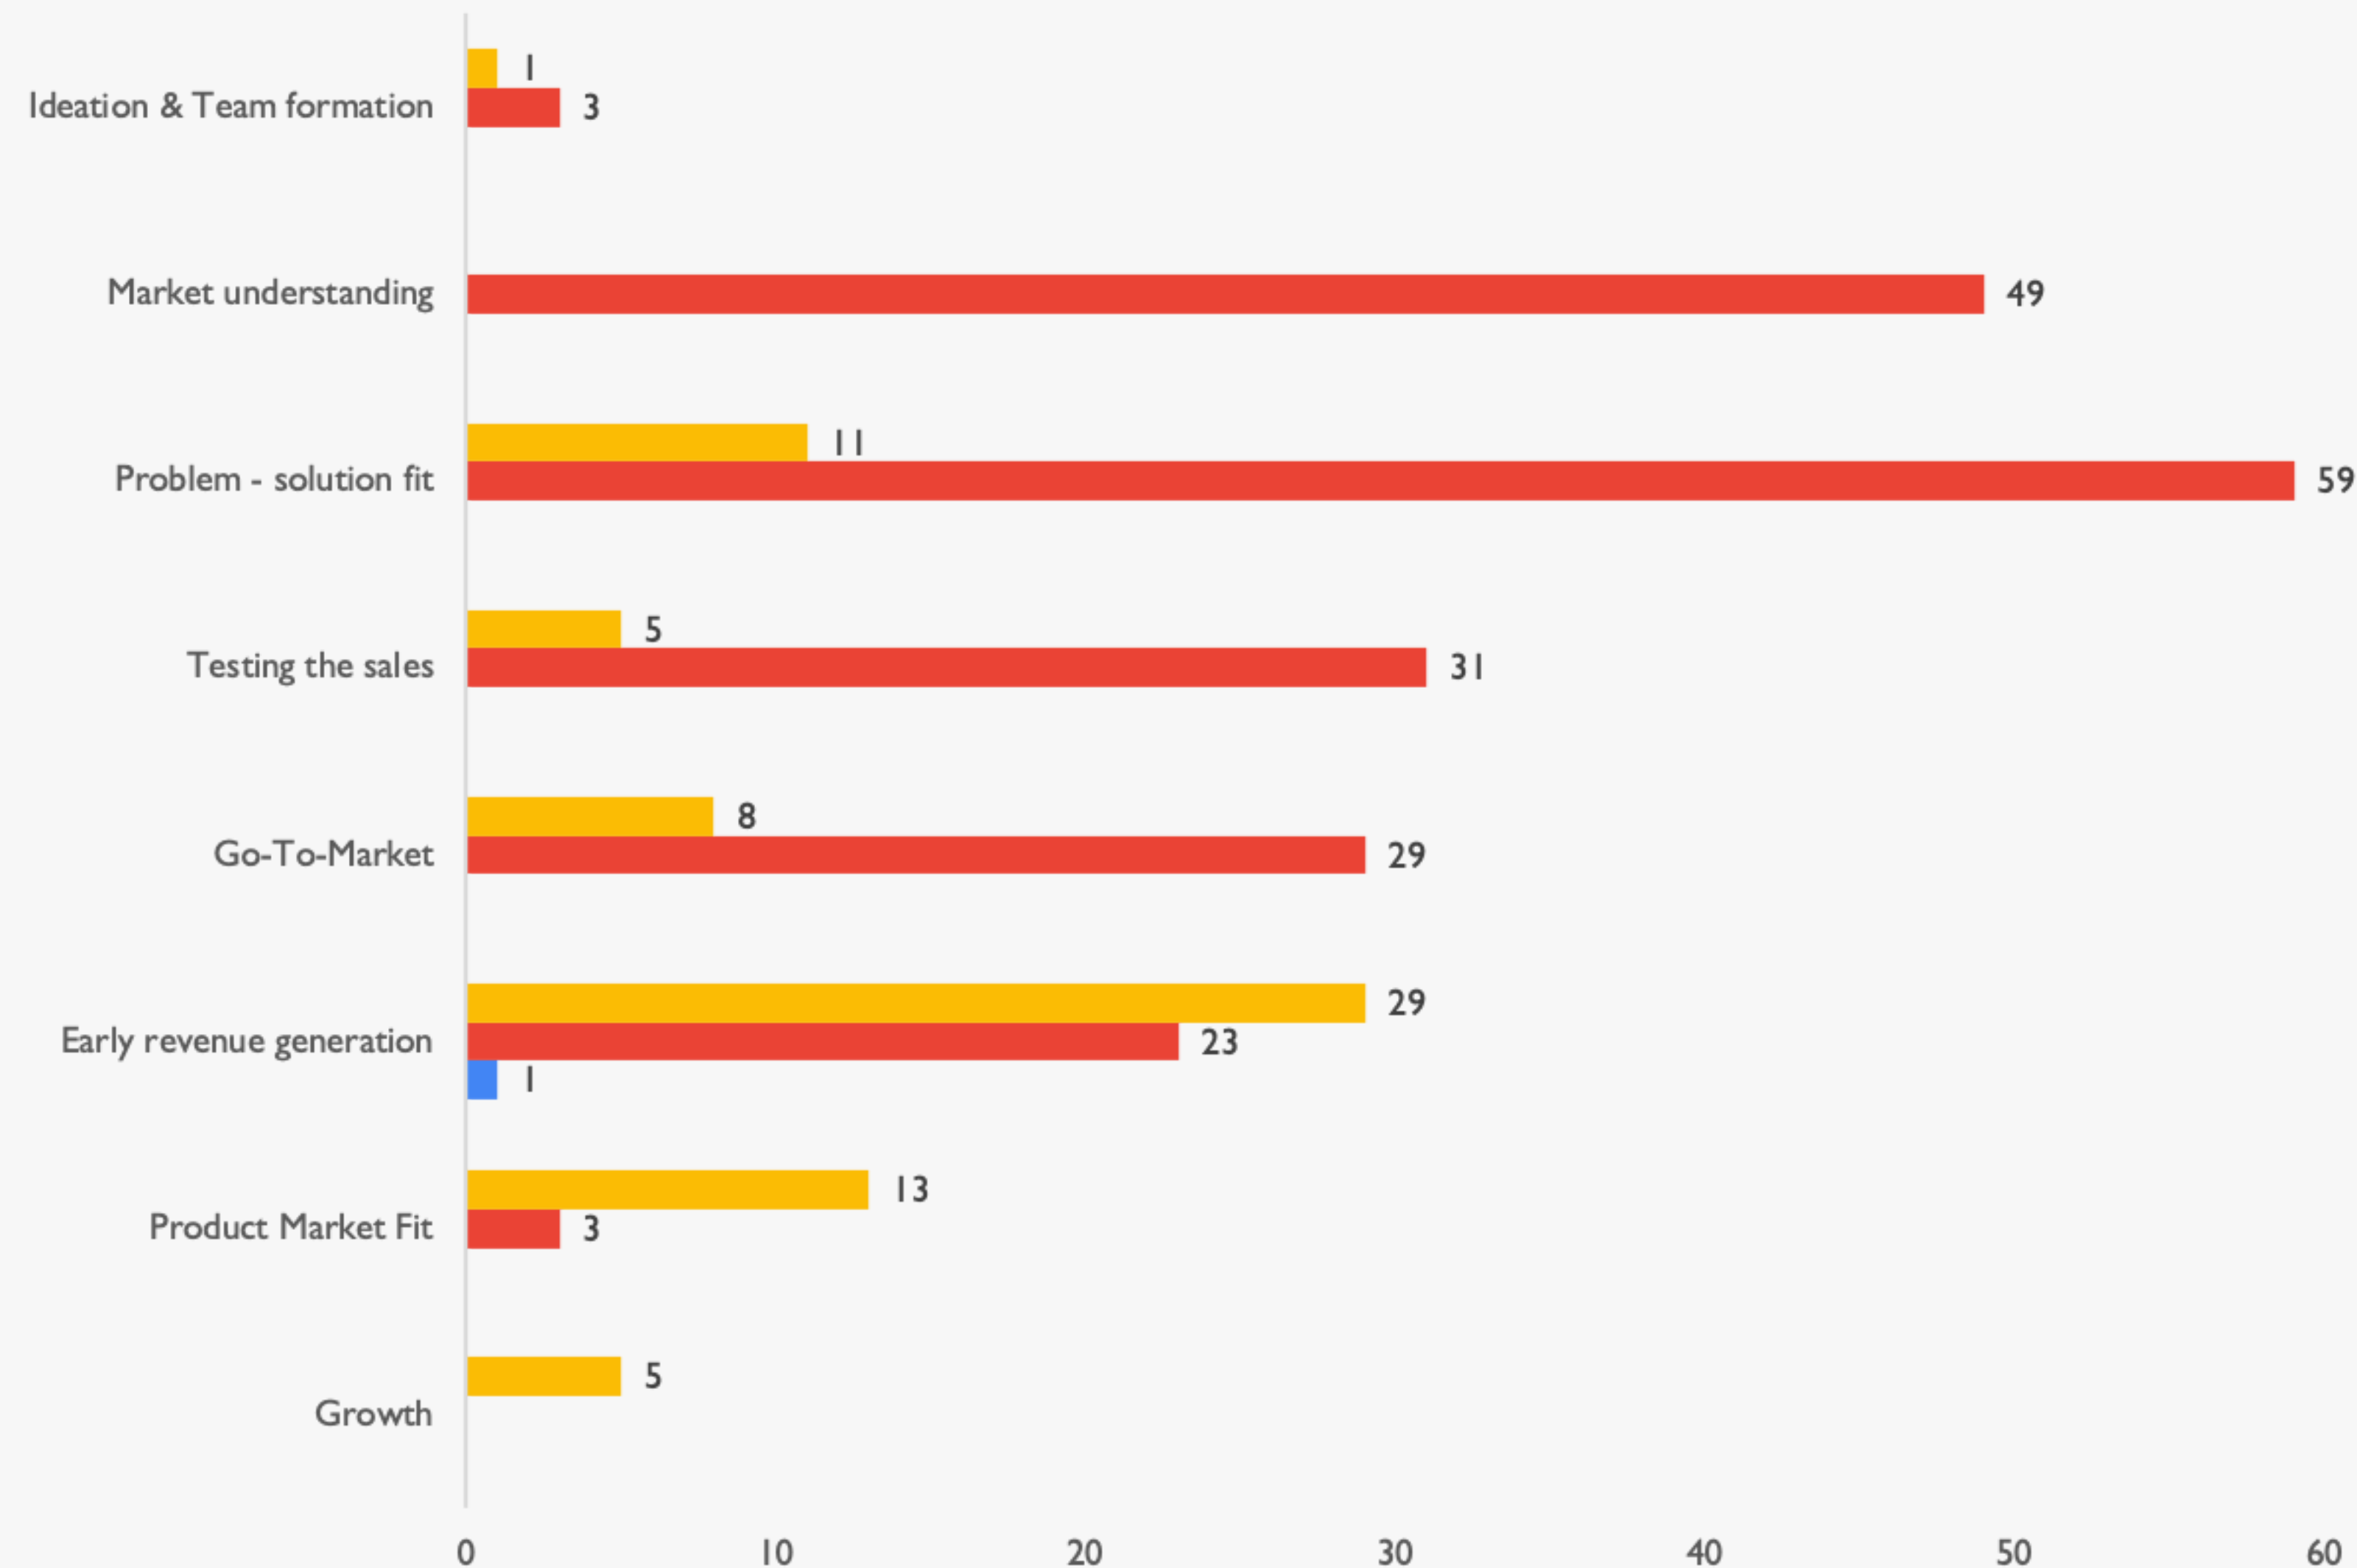

In **8 years**, we have supported **270 startups** throughout training, incubation and acceleration programs.

34% are women led startups
66% are men led startups

52% of the startups are still operating.

Development stage & fundraising

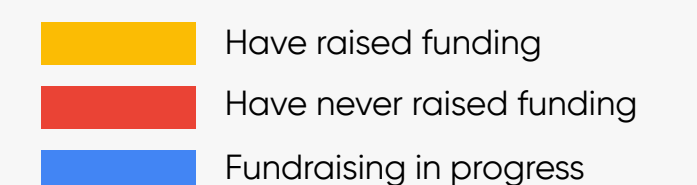

The majority of the startups are between Market understanding and Problem-solution fit stage.

60% of the startups supported are actively generating revenue.

27% have raised funding.

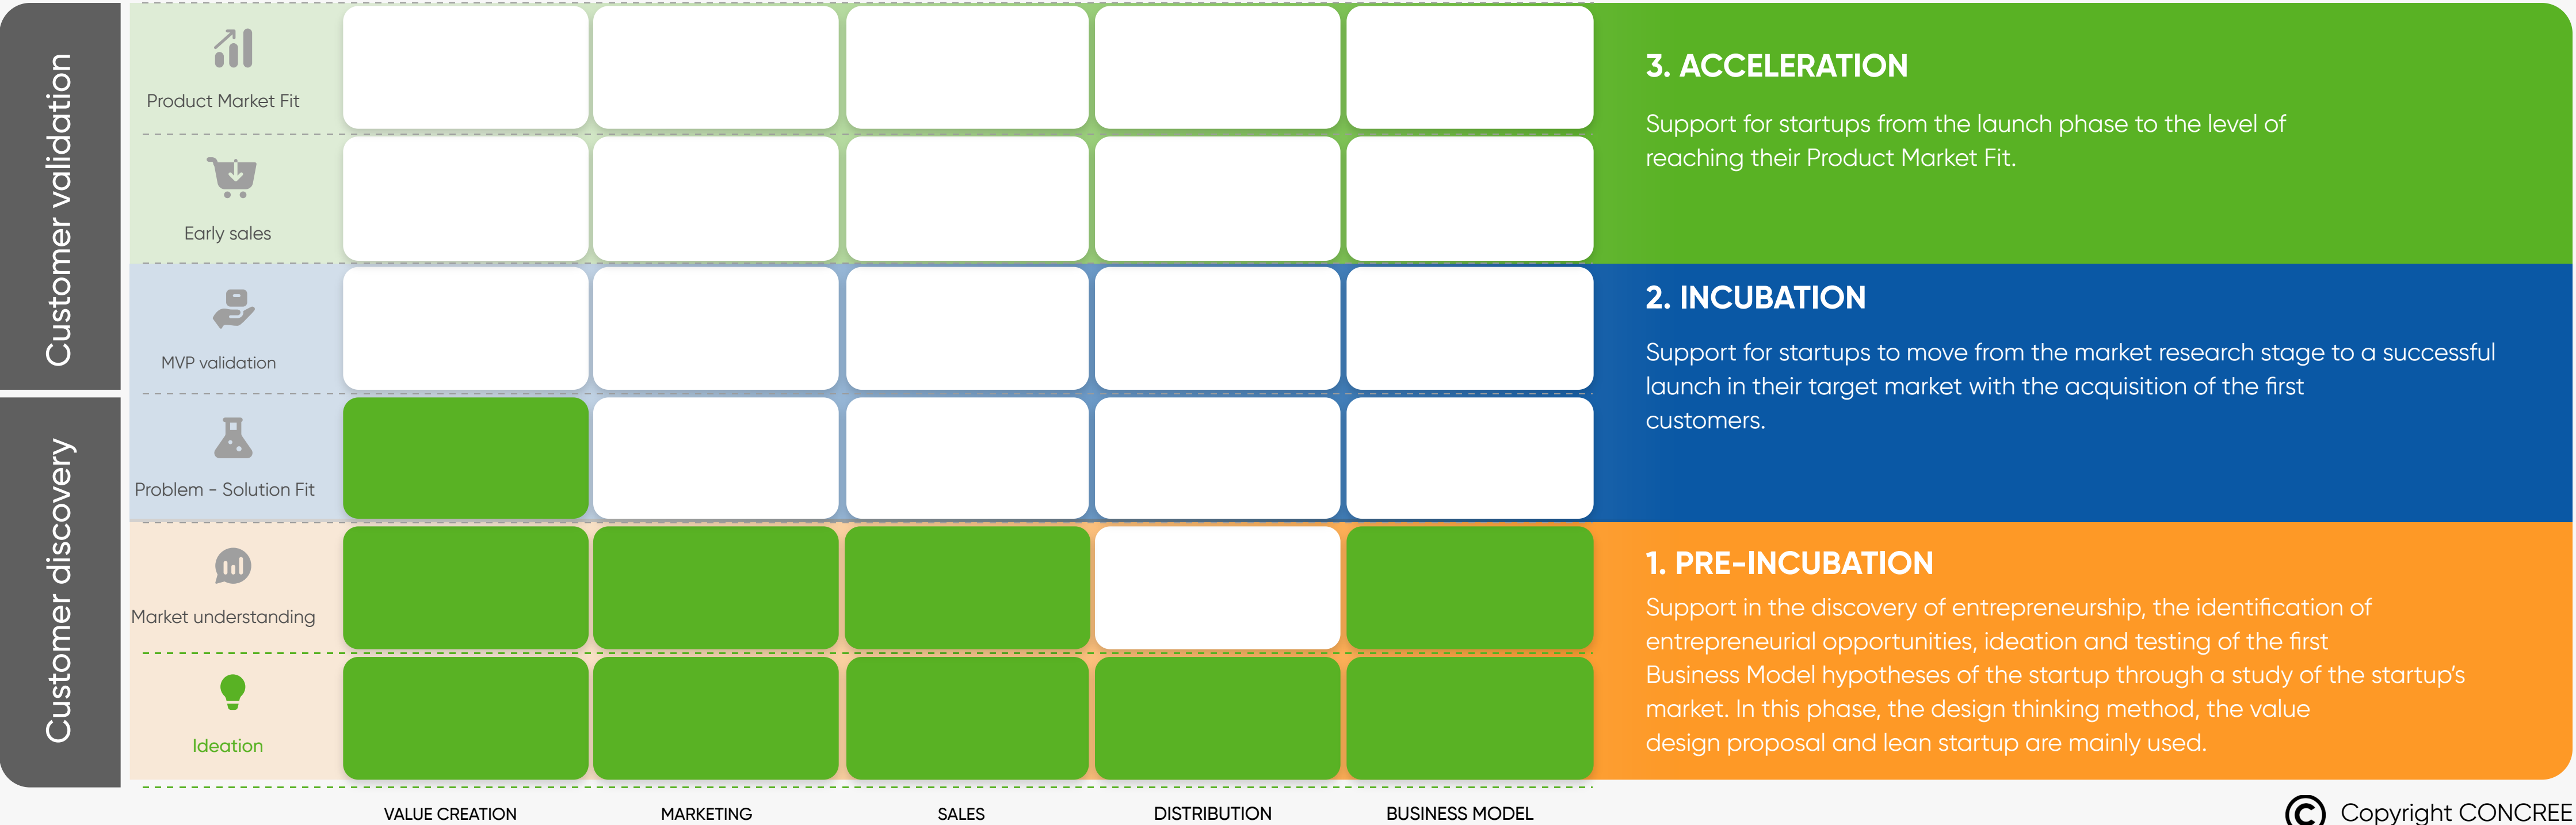

52% of the startups are still operating.

Our methodology

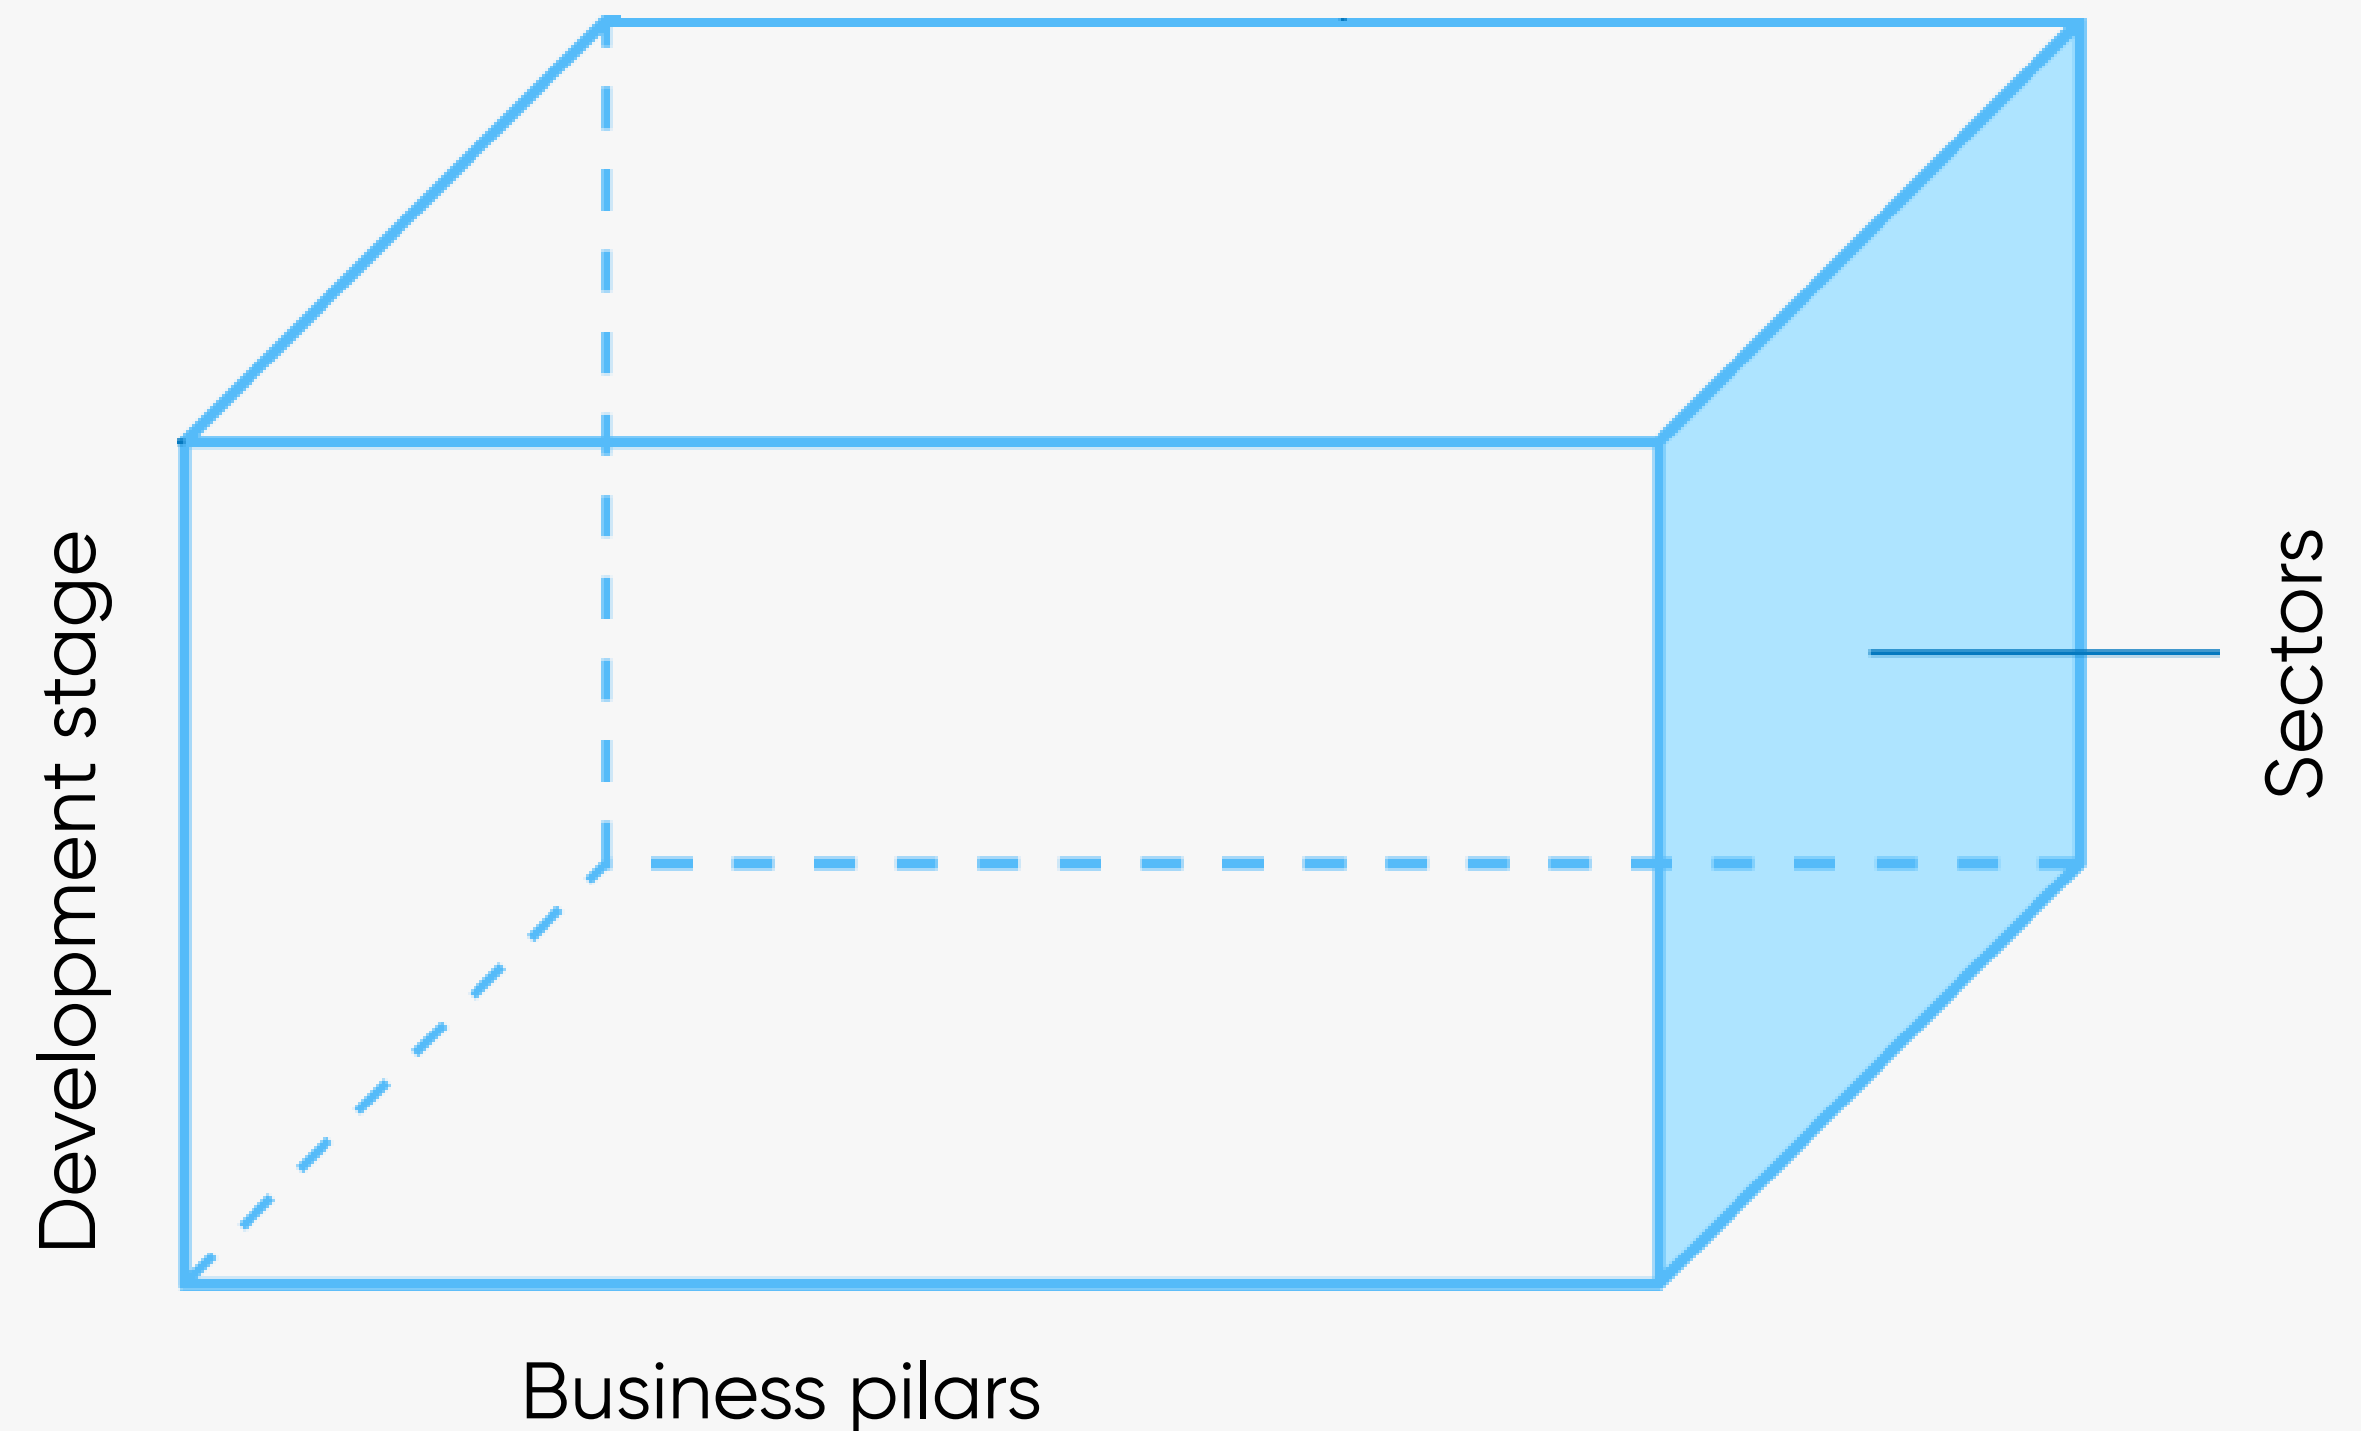

In its drive to base its startup and SME support expertise on a methodological foundation, CONCREE has designed a matrix for monitoring startups and SMEs, from ideation to their Product Market Fit stage. Each level is articulated around the 5 elements critical to the success of any company: **value creation, marketing, sales, distribution** and **business model**. CONCREE relies on this matrix to articulate its vision of the three main types of startup support: **pre-incubation, incubation** and **acceleration**.

This matrix is also a fundamental basis for the software and digital incubation platforms (lezgo, wekomkom, etc.) that CONCREE makes available to its partners and customers in various forms.

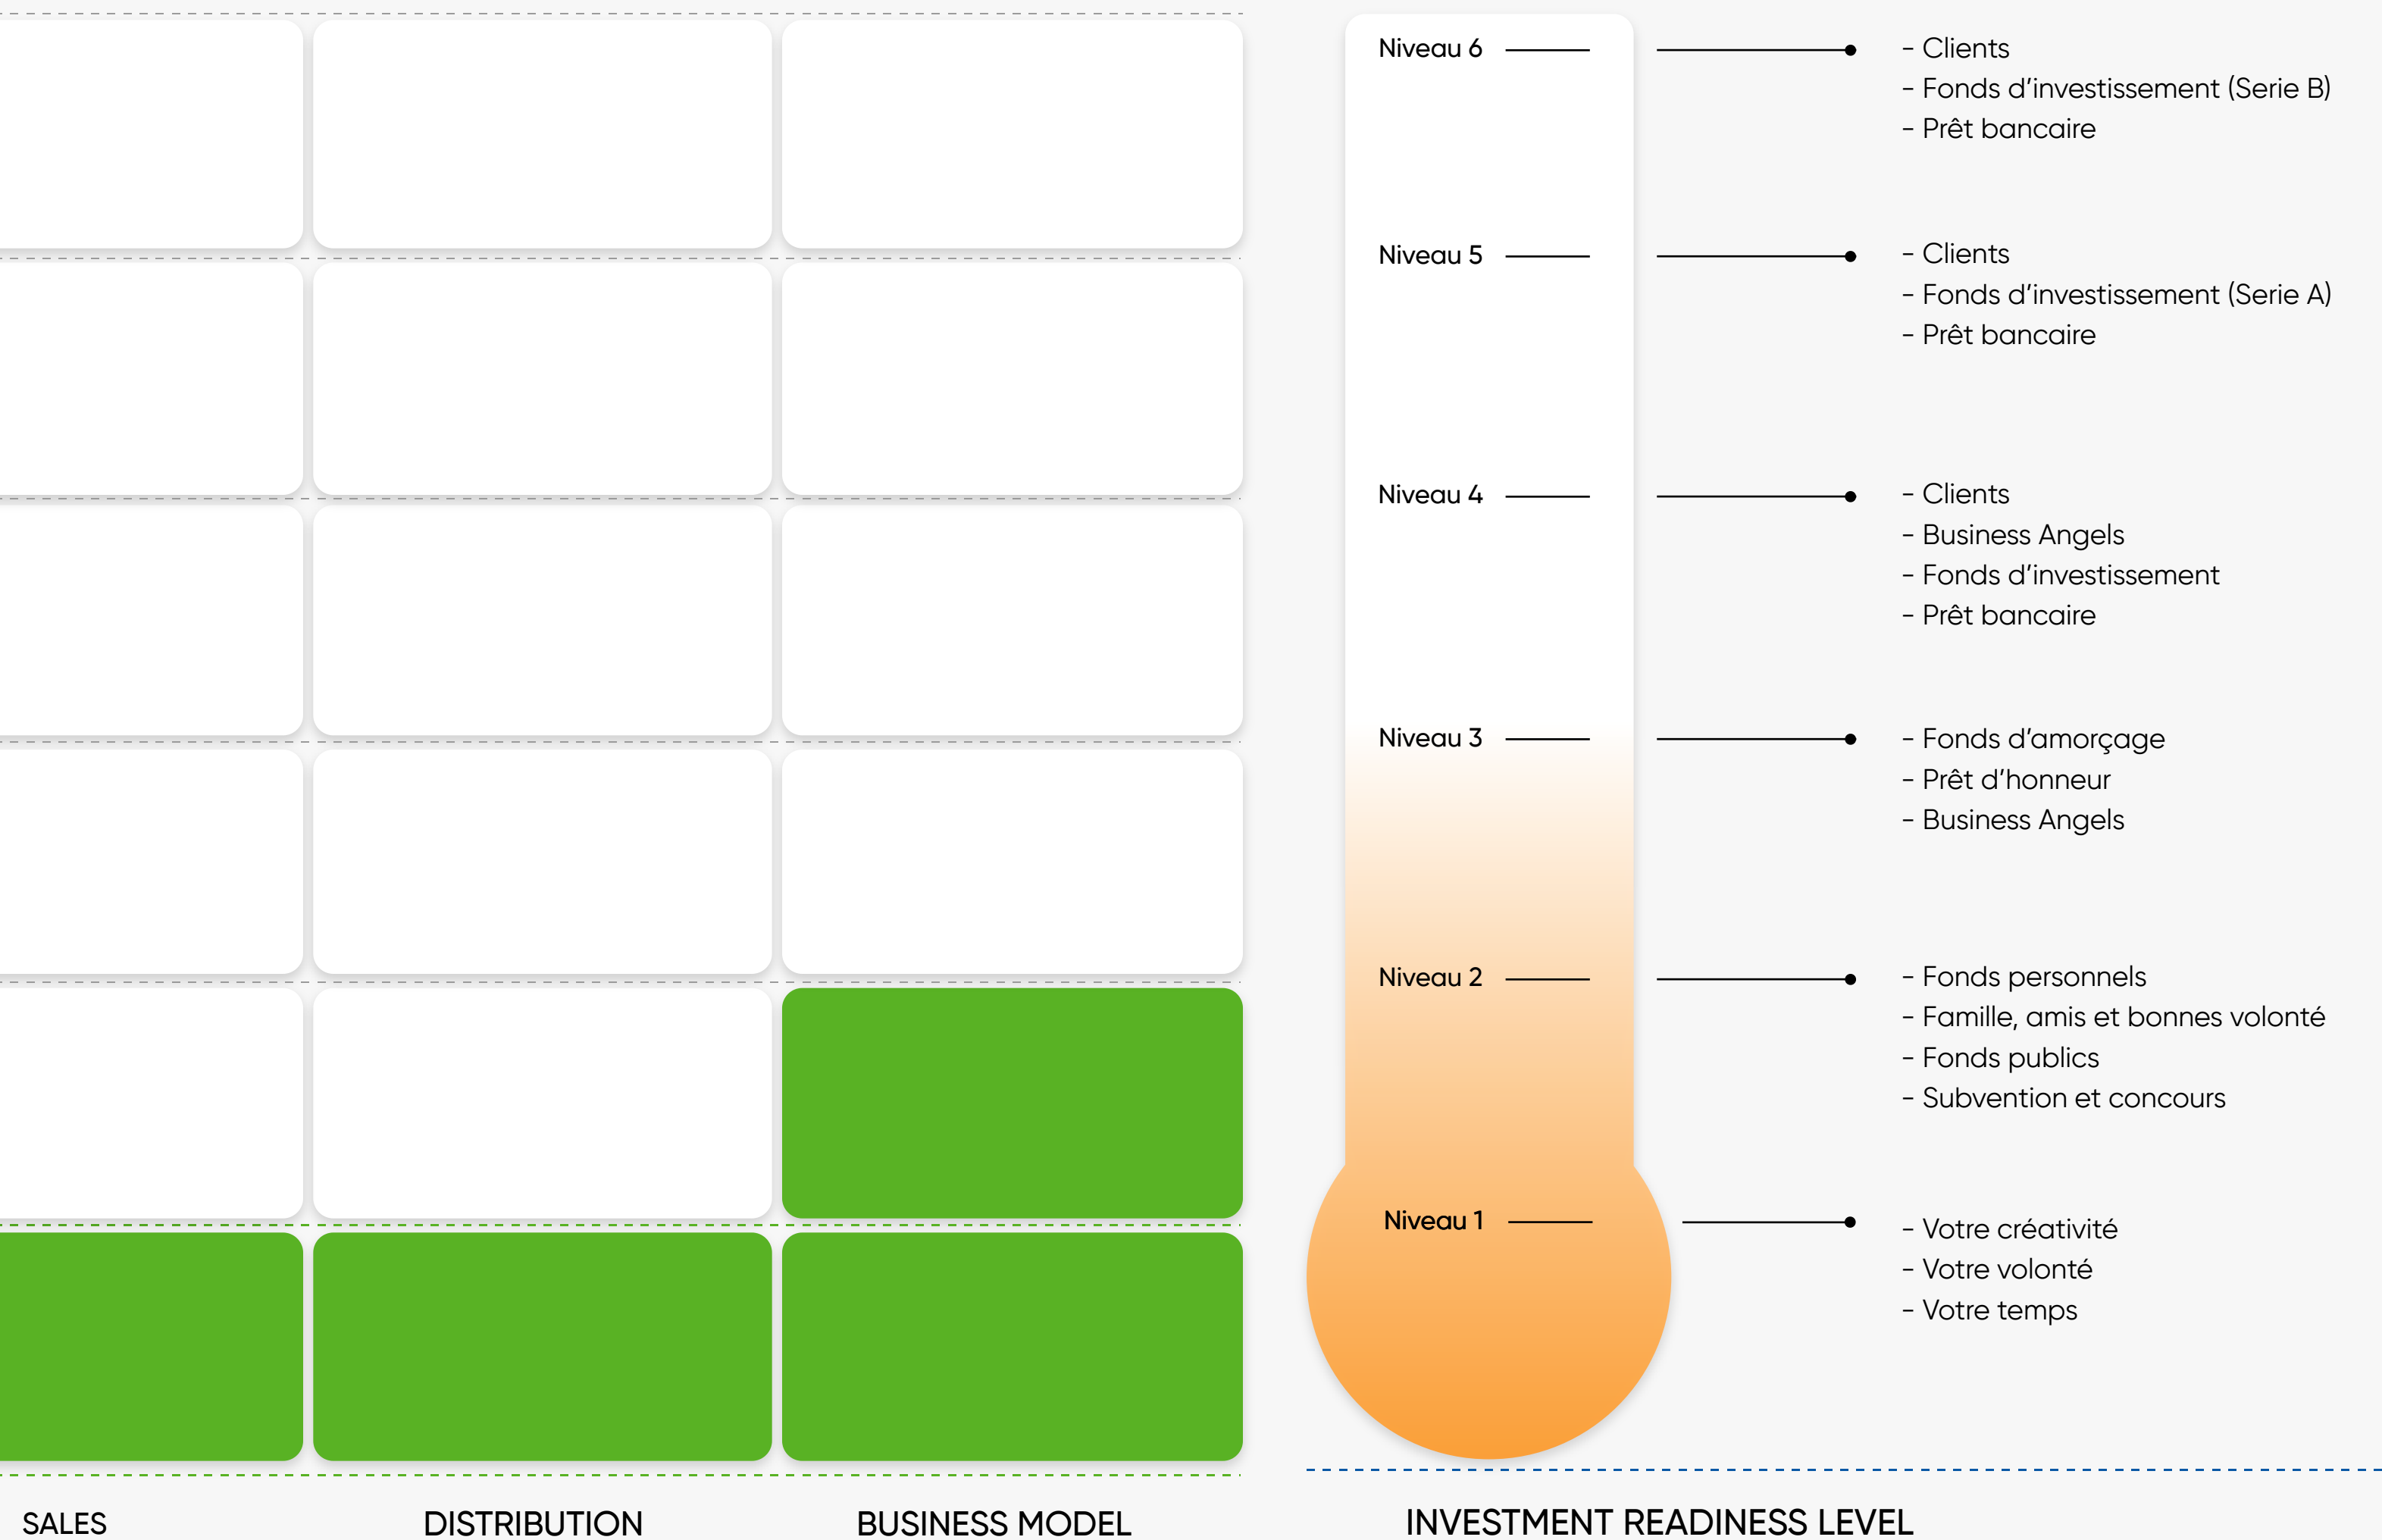

A three dimension view of the startup matrix

In order to make our incubation content as personalized as possible, we cease every relevant opportunity to collaborate in programs that are **sector** and/or **geographic** focused with the output of **contextualization** of the matrix with these two elements.

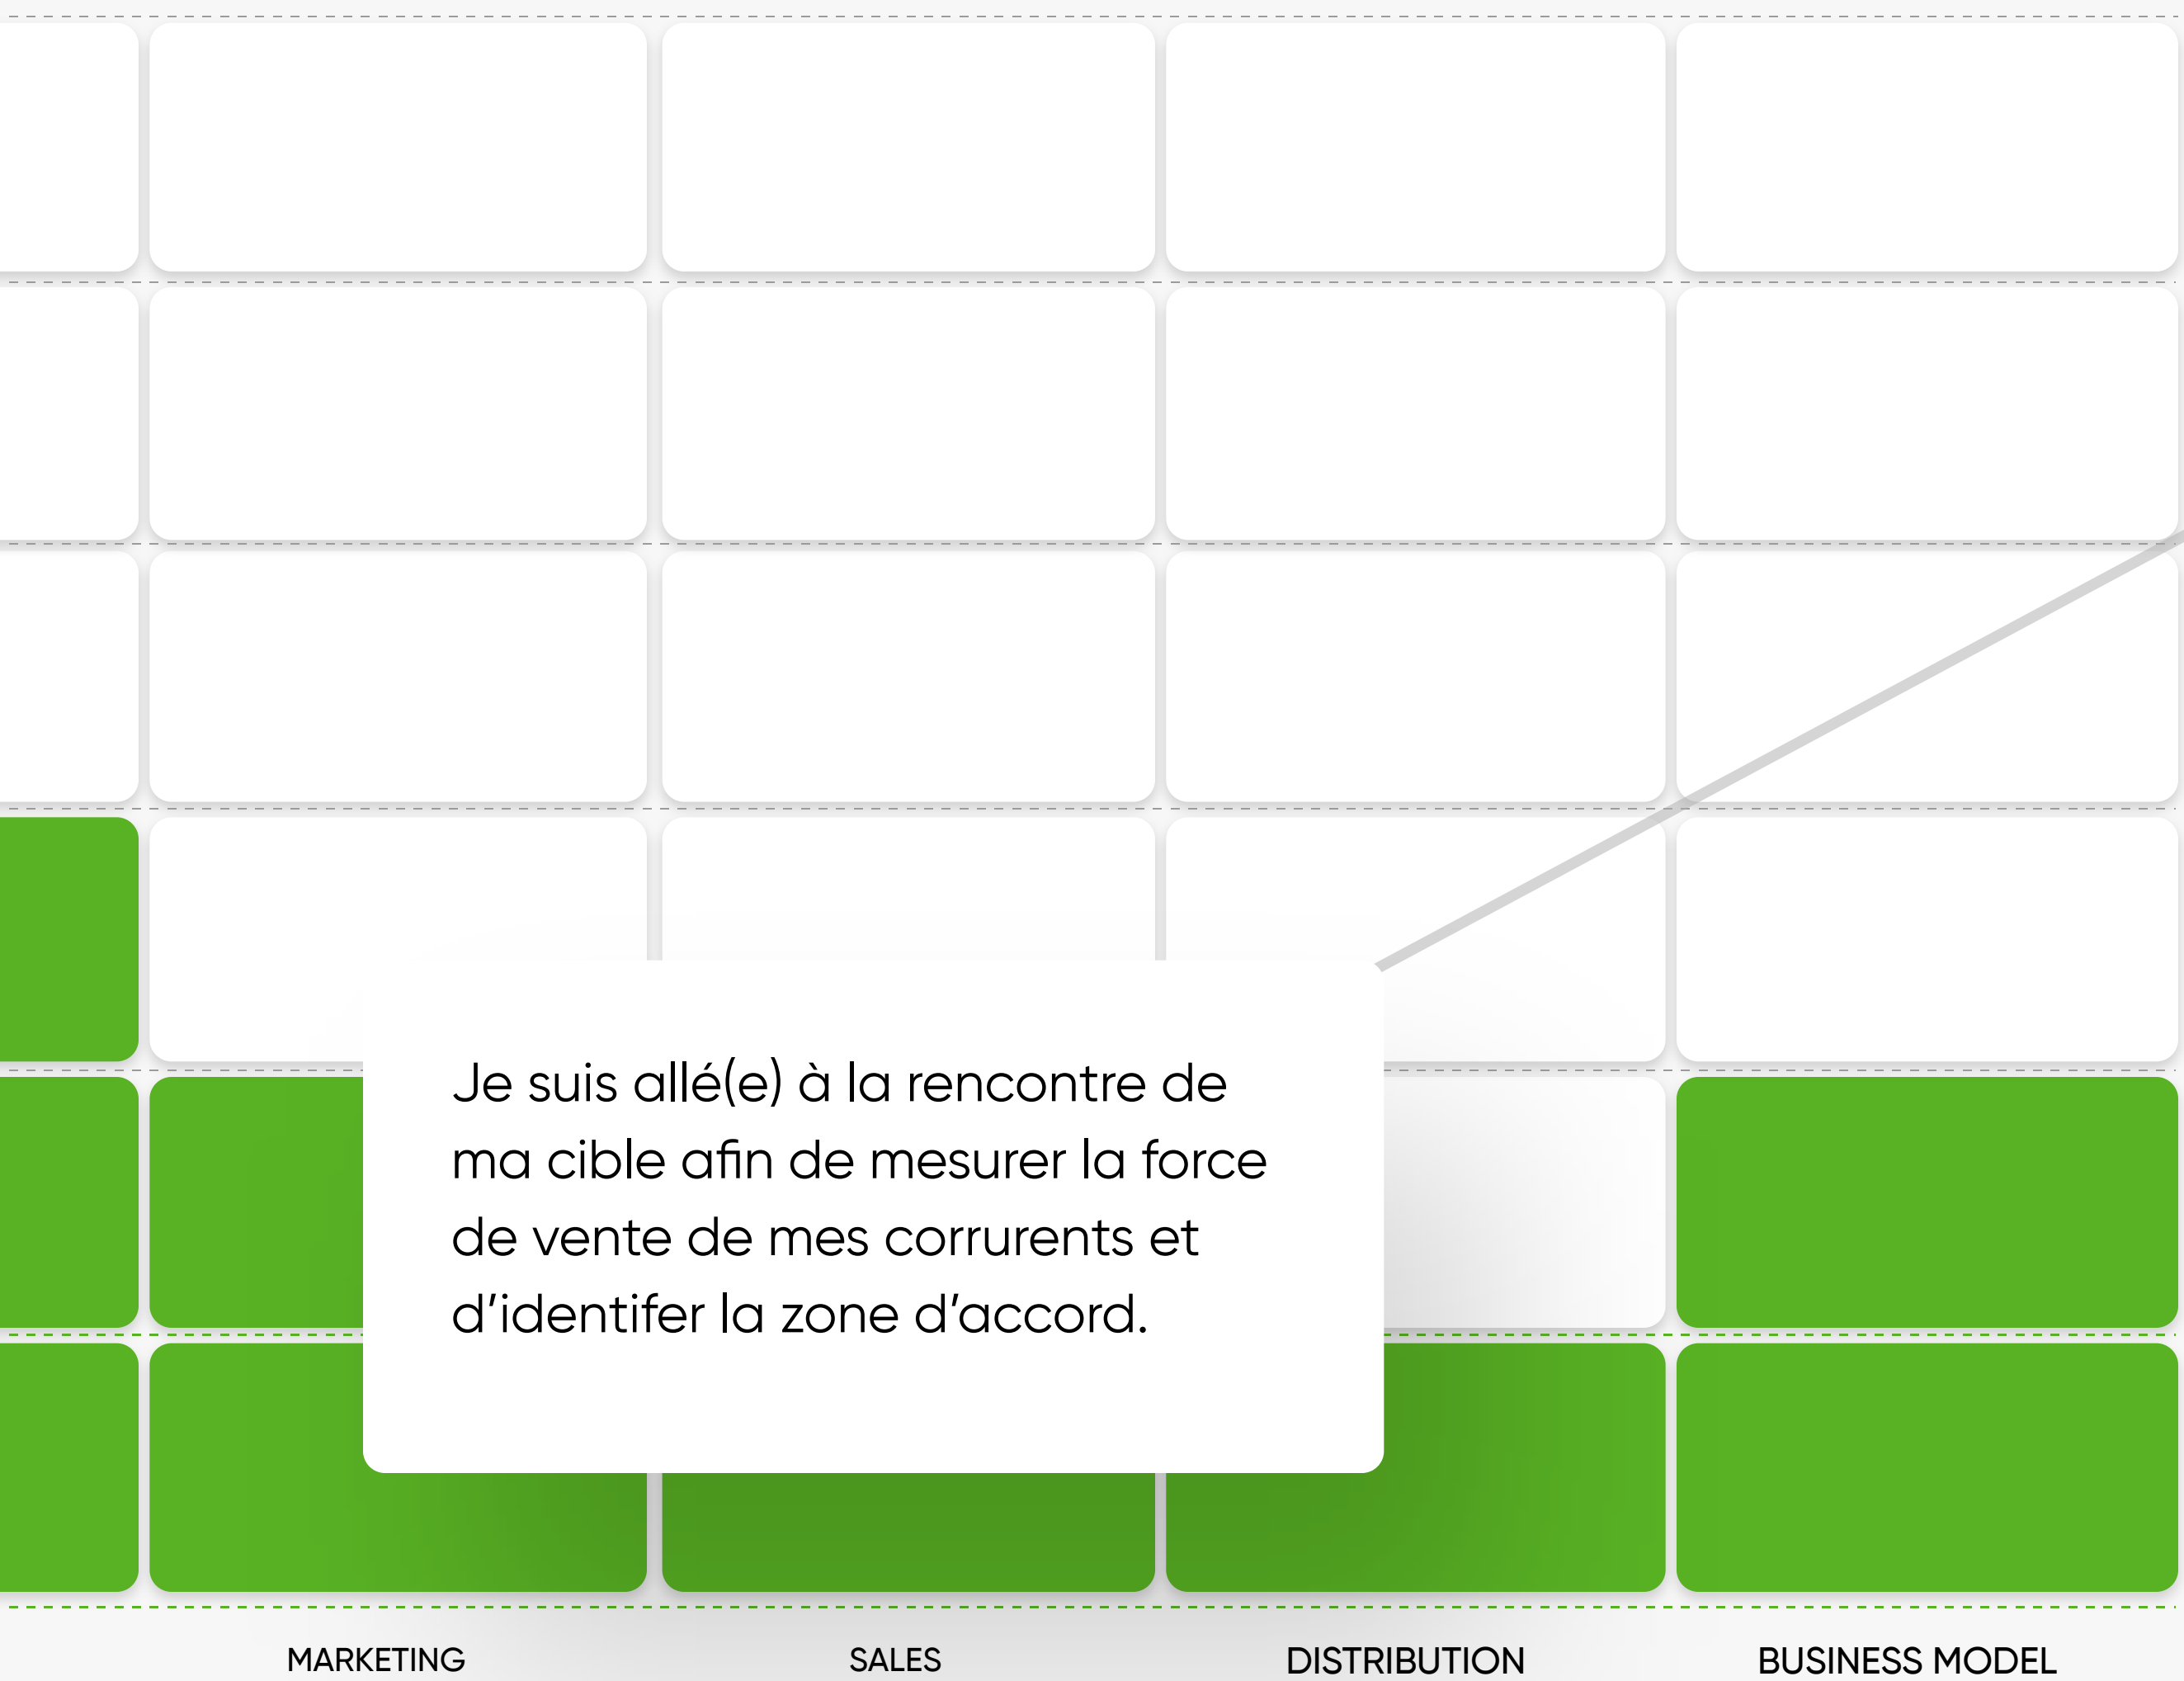

Investment readiness level

Along with our work building a robust support system, we built a beta version of an Investment Readiness Level tool aligned to our startup progress matrix. The tool is expected to be improved as we keep using it with entrepreneurs and program partners.

The startup progress matrix

How is the matrix composed...

Objective to be achieved

I have the list of features that guarantee the success of my MVP deployment to early adopters.

Checklist

- ☐ State hypothesis on my target customers
- ☐ Conduct customer interviews
- ☐ Build a non functional prototype and test with customers who are experiencing the problem the most.

Critical skills to achieve the objective

- Human centered design
- Value proposition design
- Product development
- Effective communication
- Empathy
- Active listening

How we structure our support programs

For a better management of our incubation programs, Concree has set up a structure based on four principles of incubation as follows

Jobs to be done	Support Inputs	Support Output	Outcomes
The process begins with a diagnostic session using CONCREE tools. Then a set of objectives to be reached are defined in agreement with the partner and the entrepreneur. During this step we define the specific objectives of the entrepreneur or startup in terms of willingness to progress.	Once the objectives have been determined, a set of inputs in the form of incubation activities are carried out to achieve the objectives. CONCREE has defined four categories of incubation activities: training - coaching/ mentoring - networking and financing.	The outputs represent the results of the inputs on the startup's progress that can be observed in the short term. During this phase, activity reports including data on program activities and the balance sheet of each start-up are produced.	The results expected in a medium/long term horizon in terms of job creation, turnover, funds raised, impact on the economy etc.

Incubation as
a service

Our products: Our channels to deliver startup progress

Incubation as a service

We have the privilege to work with the most active public, private and non government organizations in the field of Entrepreneurship in West Africa. We collaborate in designing and/or managing (from call for application) entrepreneur support programs that both help startups make progress and solve given societal, economical or environmental problems. The programs always range from ideation to Product Market Fit and can be pre-incubation, incubation or acceleration program. 3/4 of programs we have help setup and manage encompass funding opportunities for entrepreneurs. Since 2016, we have supported more than 250 startups and SME through this channel with partners/clients listed below.

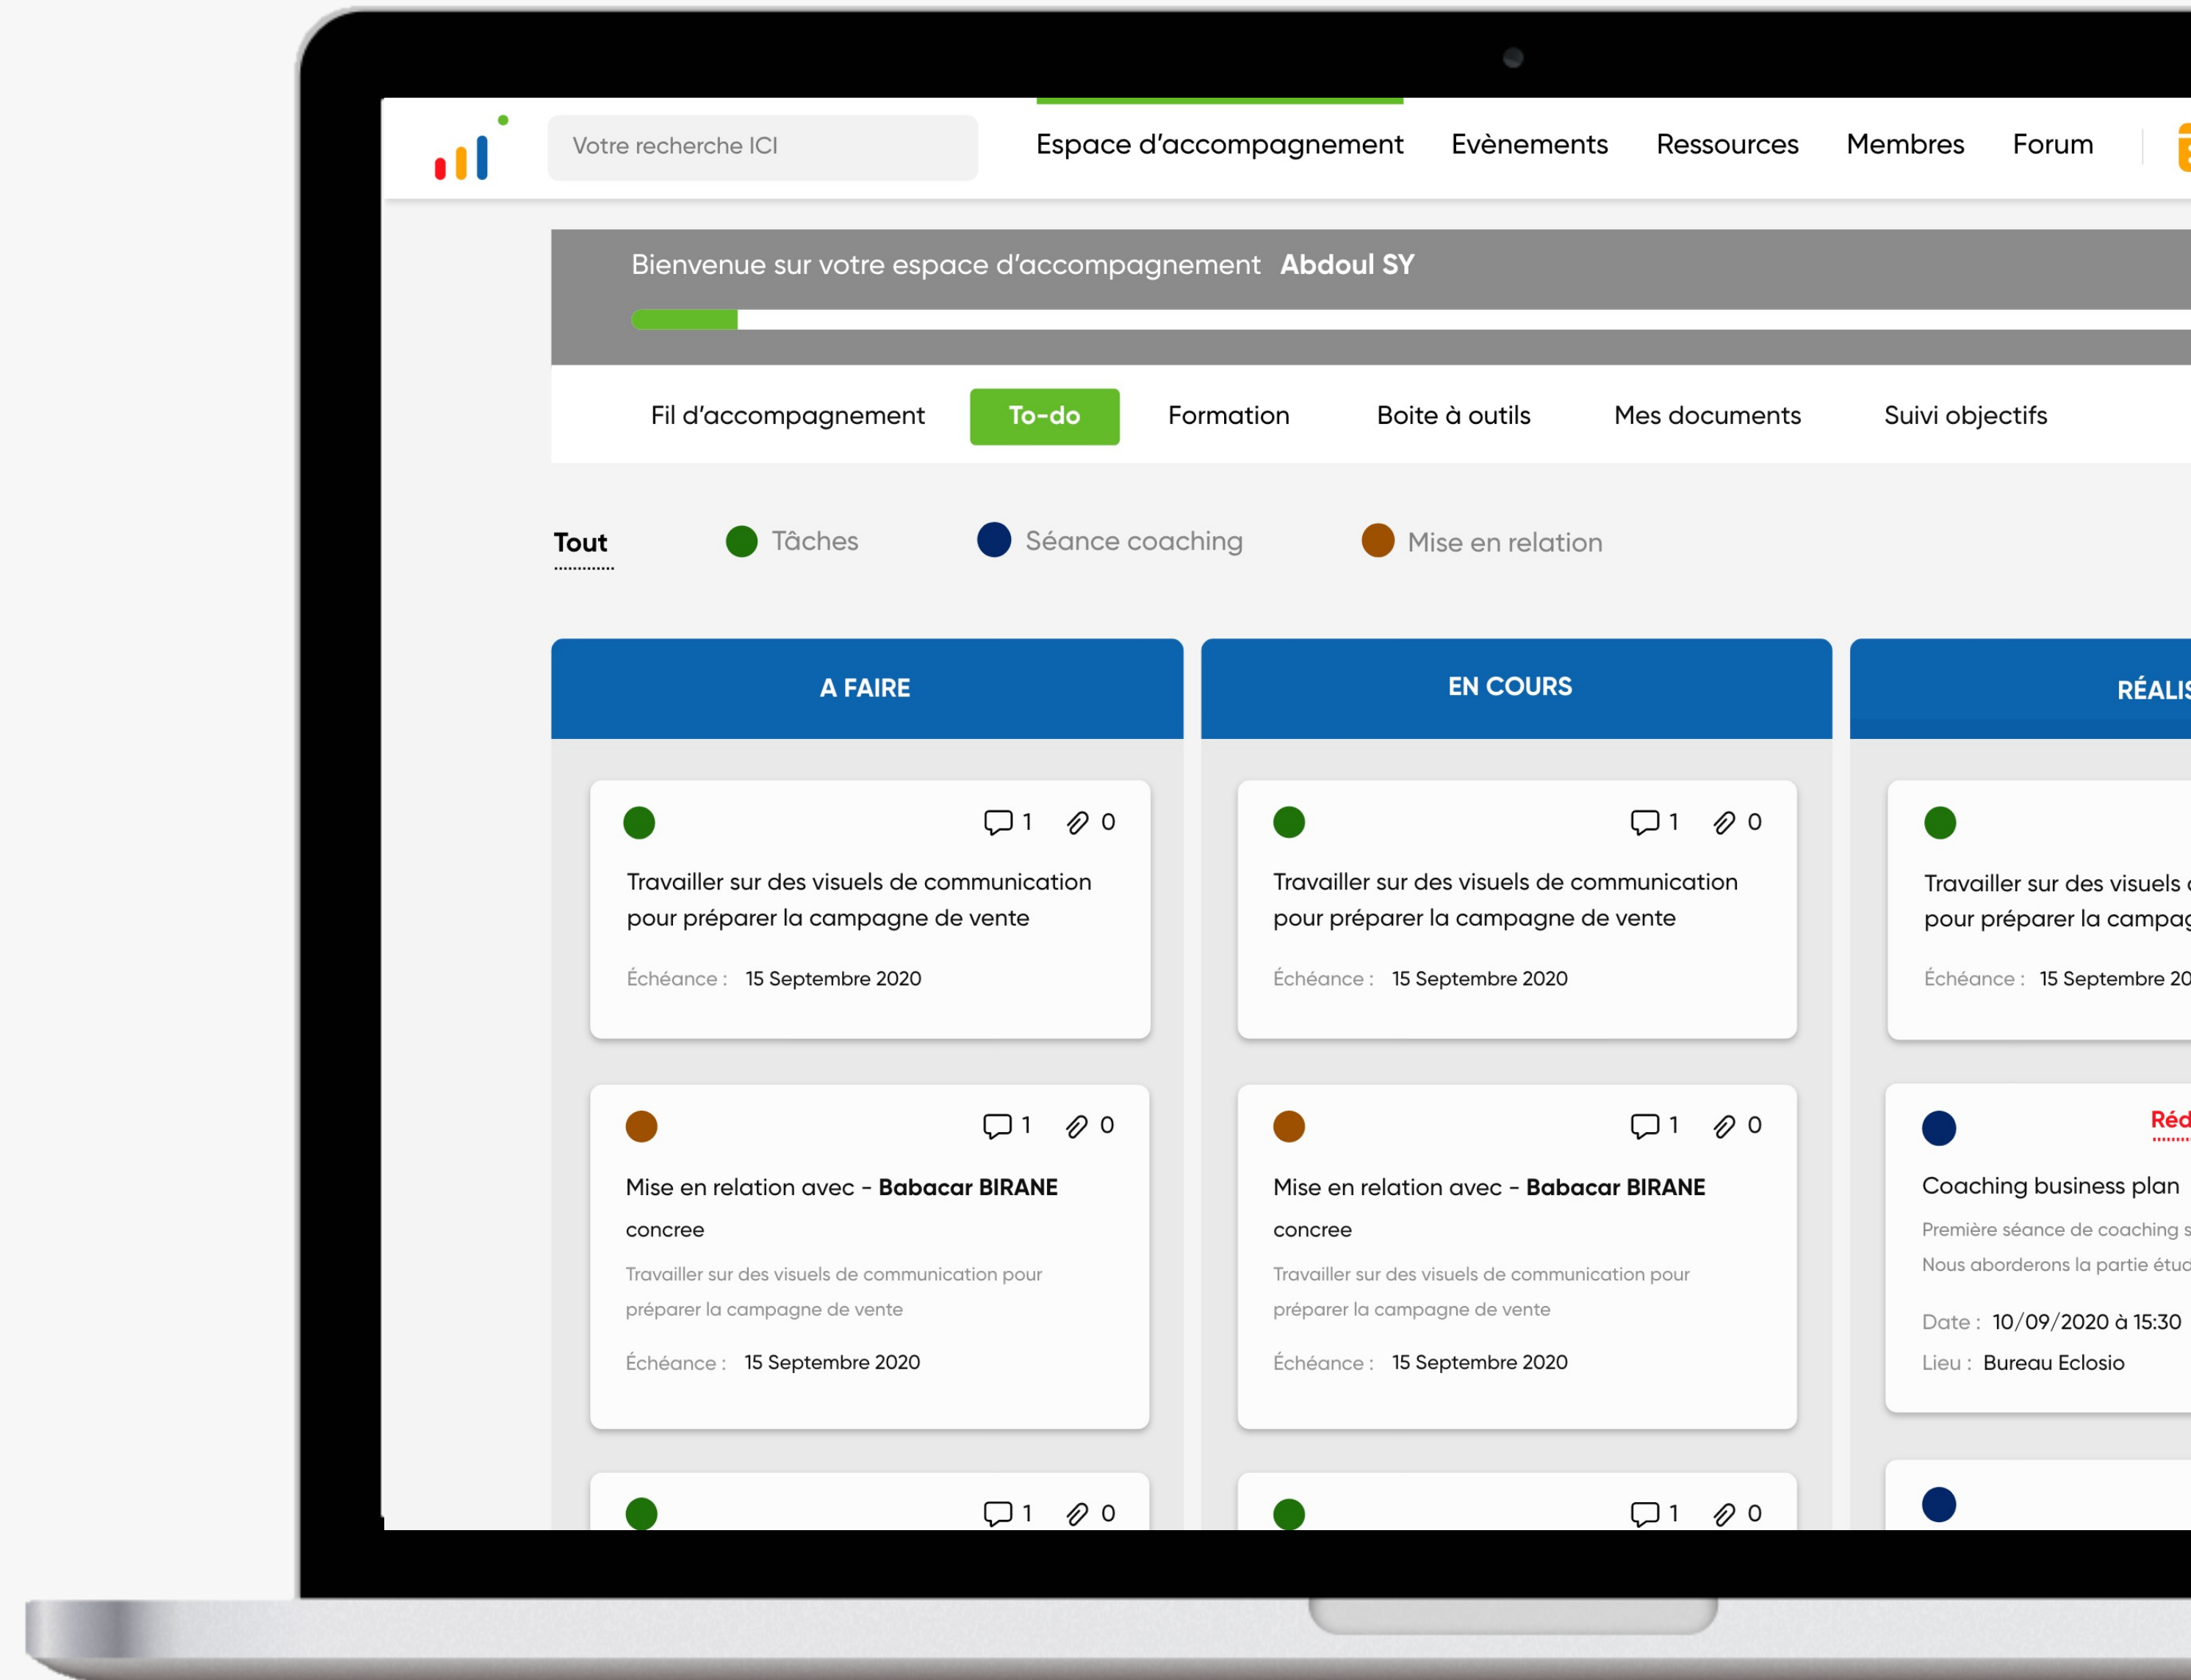

Lezgo is a software as a service that we built for any Entrepreneur Support program. It aims at serving as a virtual assistant that helps focus on the critical elements capable of identifying the best suitable startups and help them make concrete progress.

Lezgo helps also measure the impact of programs thanks to its built-in metrics feature but also to powerful tools integrated such as Power BI.

More on www.lezgo.io

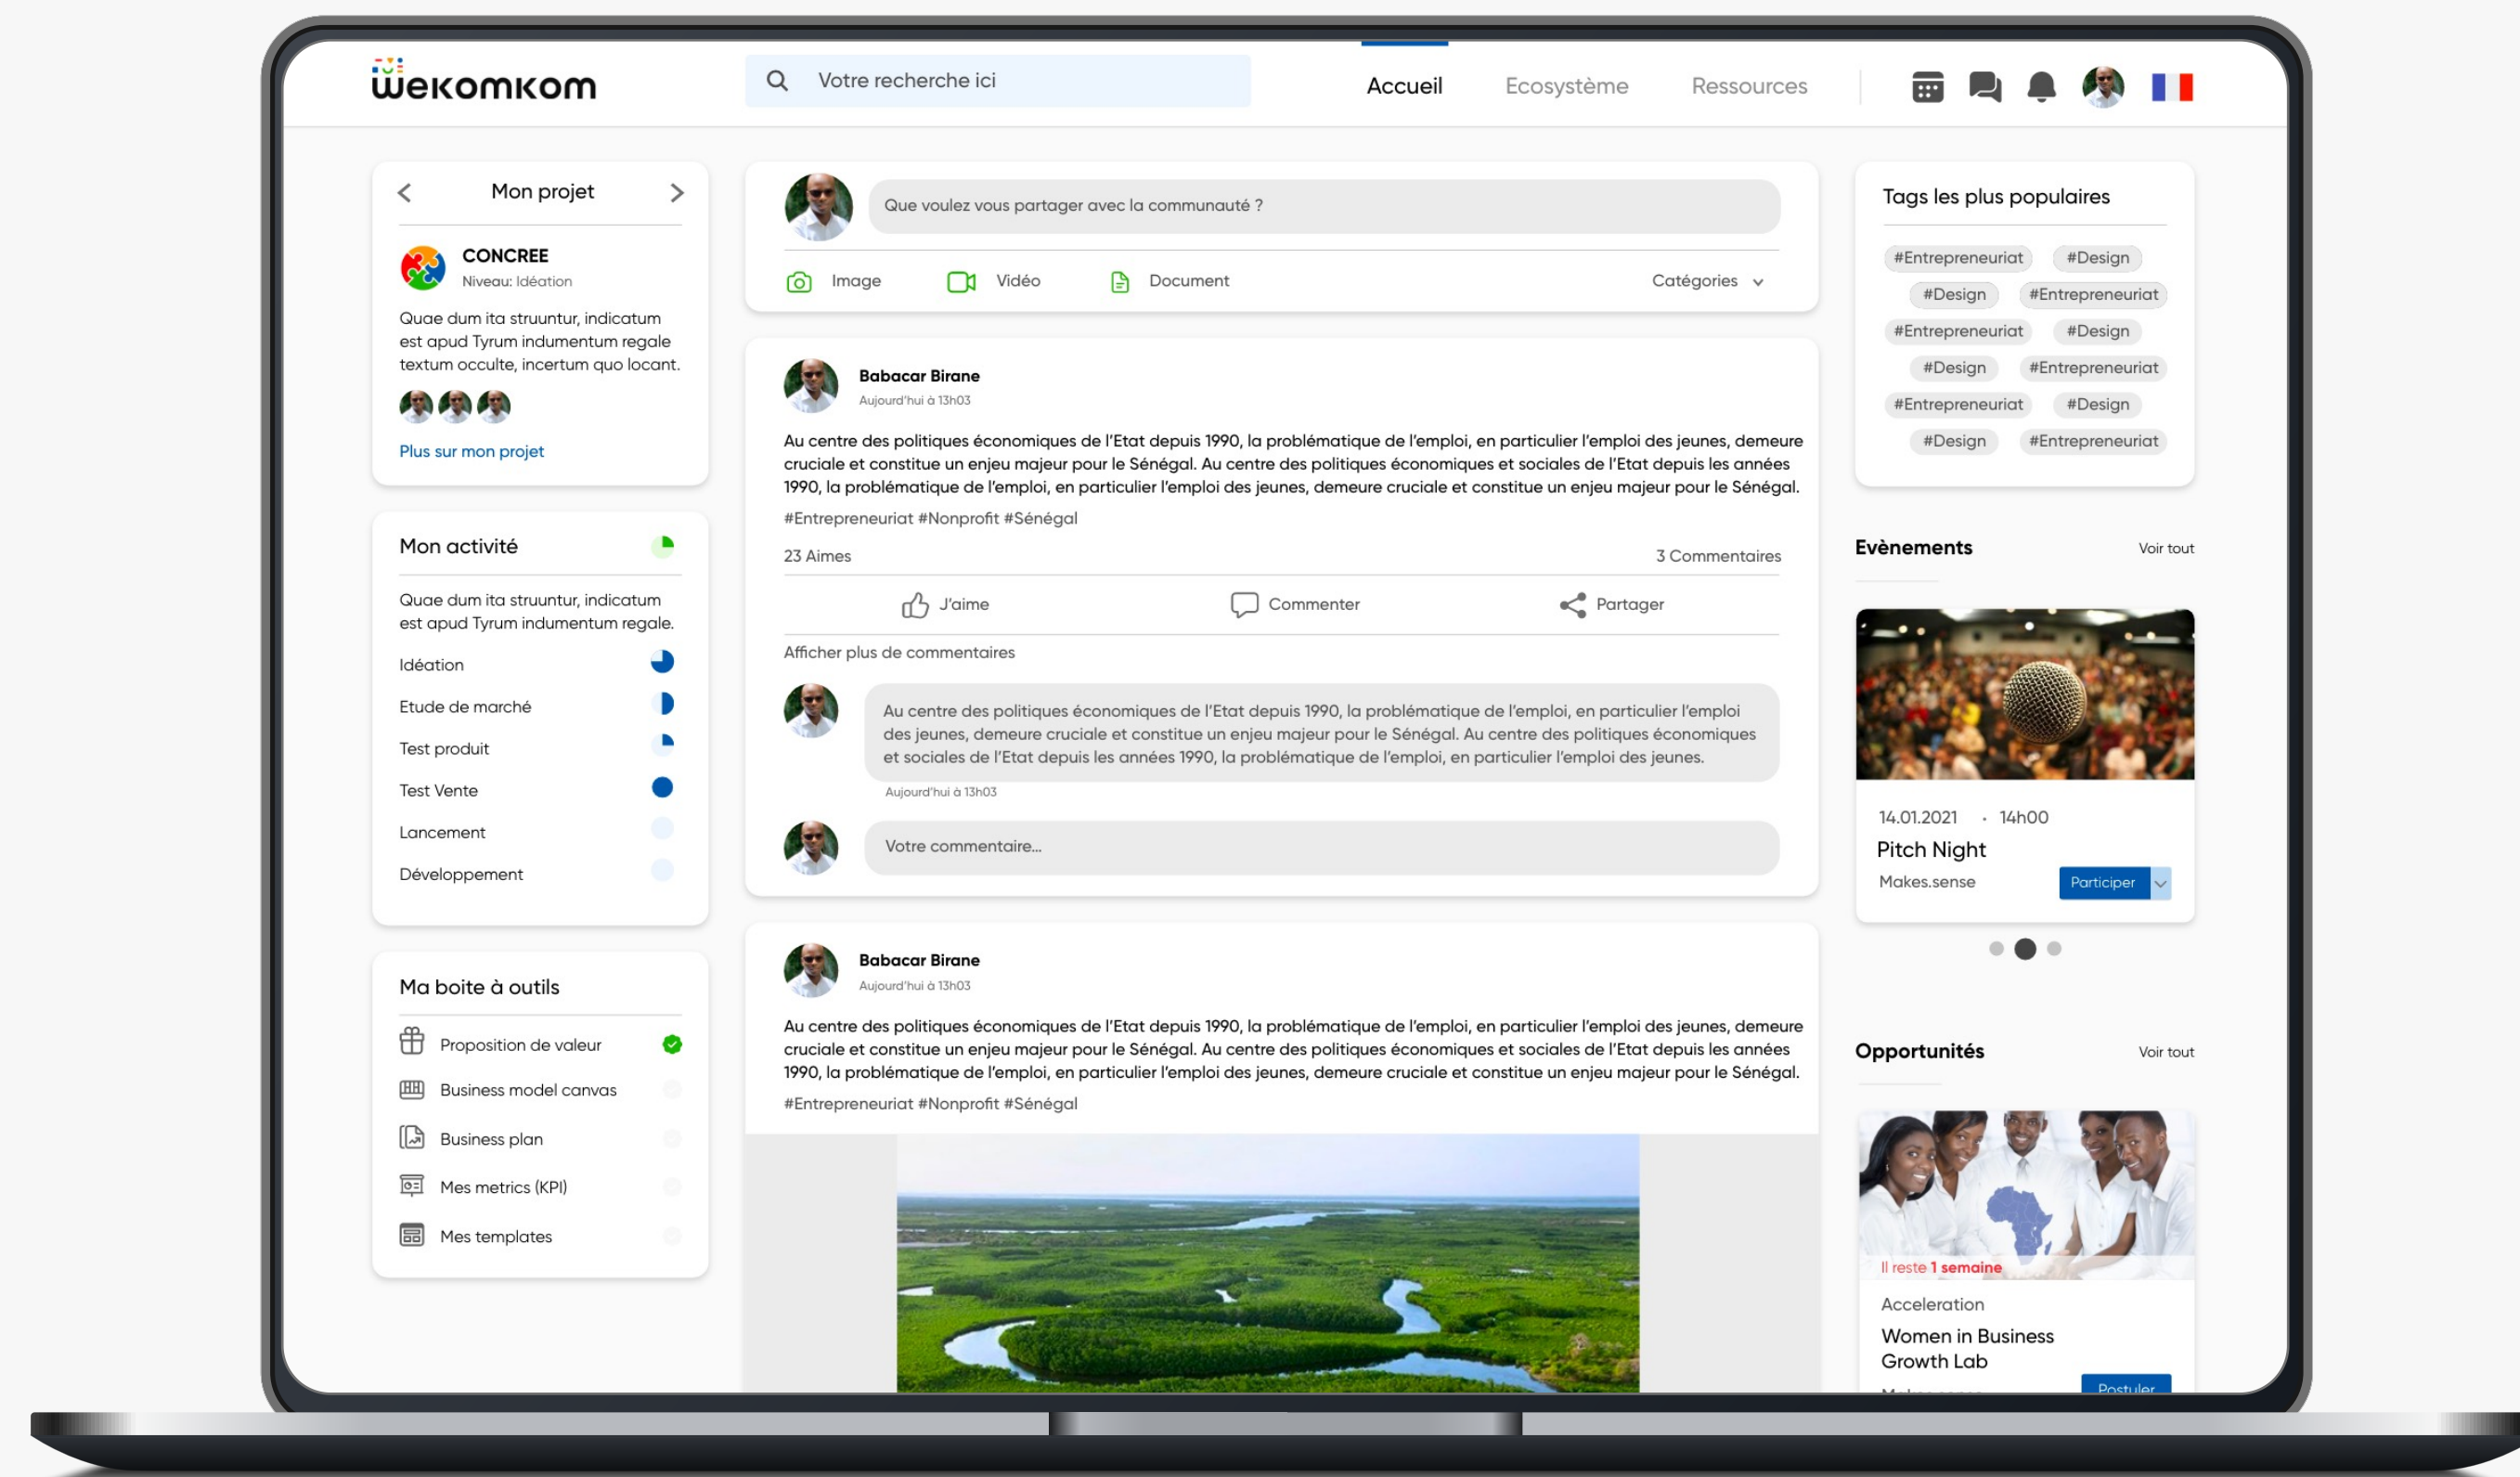

Wekomkom

Wekomkom is an online self-incubation and networking platform. It gives any entrepreneur with an internet connexion and willingness to create access to clear guidelines, key resources and entrepreneurial ecosystem key players in order to kickstart his startup at his own pace.

Wekomkom also serves as a dealflow preparation and sourcing channel for incubators, accelerators and investors, etc.

More on www.wekomkom.com

THE KOMKOMBOX

La komkombox est un kit physique qui permet aux entrepreneurs de vivre l'expérience wekomkom, sans pour autant se connecter à internet.

La komkombox comprend, entre autres:

Clé USB

...pour disposer des ressources et des outils de travail sans connexion internet. La clé USB pourra aussi se connecter au téléphone.

Manuel de l'entrepreneur

Se basant sur la méthodologie de création de startups, ce manuel permet à l'entrepreneur d'acquérir les compétences critiques.

Workbook de l'entrepreneur

Un carnet de travail à partir duquel l'entrepreneur peut travailler à son rythme en offline et mettre à jour son projet en ligne à sa guise.

La map de l'entrepreneur

Une carte descriptive du parcours de création mais aussi des acteurs de l'écosystème local (sous forme de jeux de carte). Ainsi, l'entrepreneur n'est jamais perdu.

Canevas de travail

Un ensemble de canevas (modèle économique, proposition de valeur, étude de marché, business plan...) en guise d'outils pratiques pour travailler seul ou en groupe.

Matériels de travail

Du matériel essentiel pour travailler tel que des post-it, stylos, etc.

A woman wearing a black hijab, glasses, and a light blue surgical mask is looking down at a document. She is wearing a light pink long-sleeved shirt and large hoop earrings. The background is a bright, out-of-focus indoor space with large windows.

Startup ludo

We believe in the power of gamification to achieve important goals. Thus, we have developed, in partnership with the French institute, a Ludo game that serves as a practical tool to sensitize and initiate in entrepreneurship.

Ludo game being a popular game in Africa.

MEET the TEAM

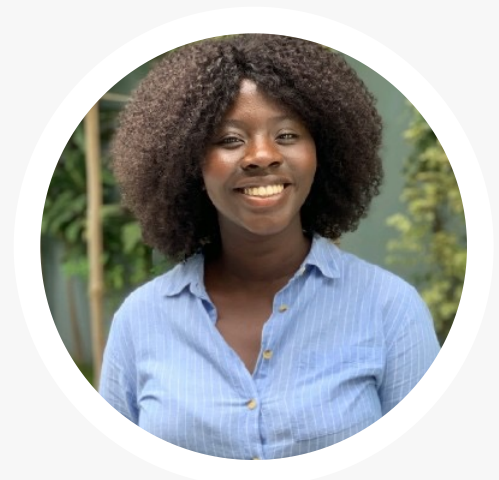

A young, talented and ambitious team eager to make impact.

Entrepreneur Support Guide

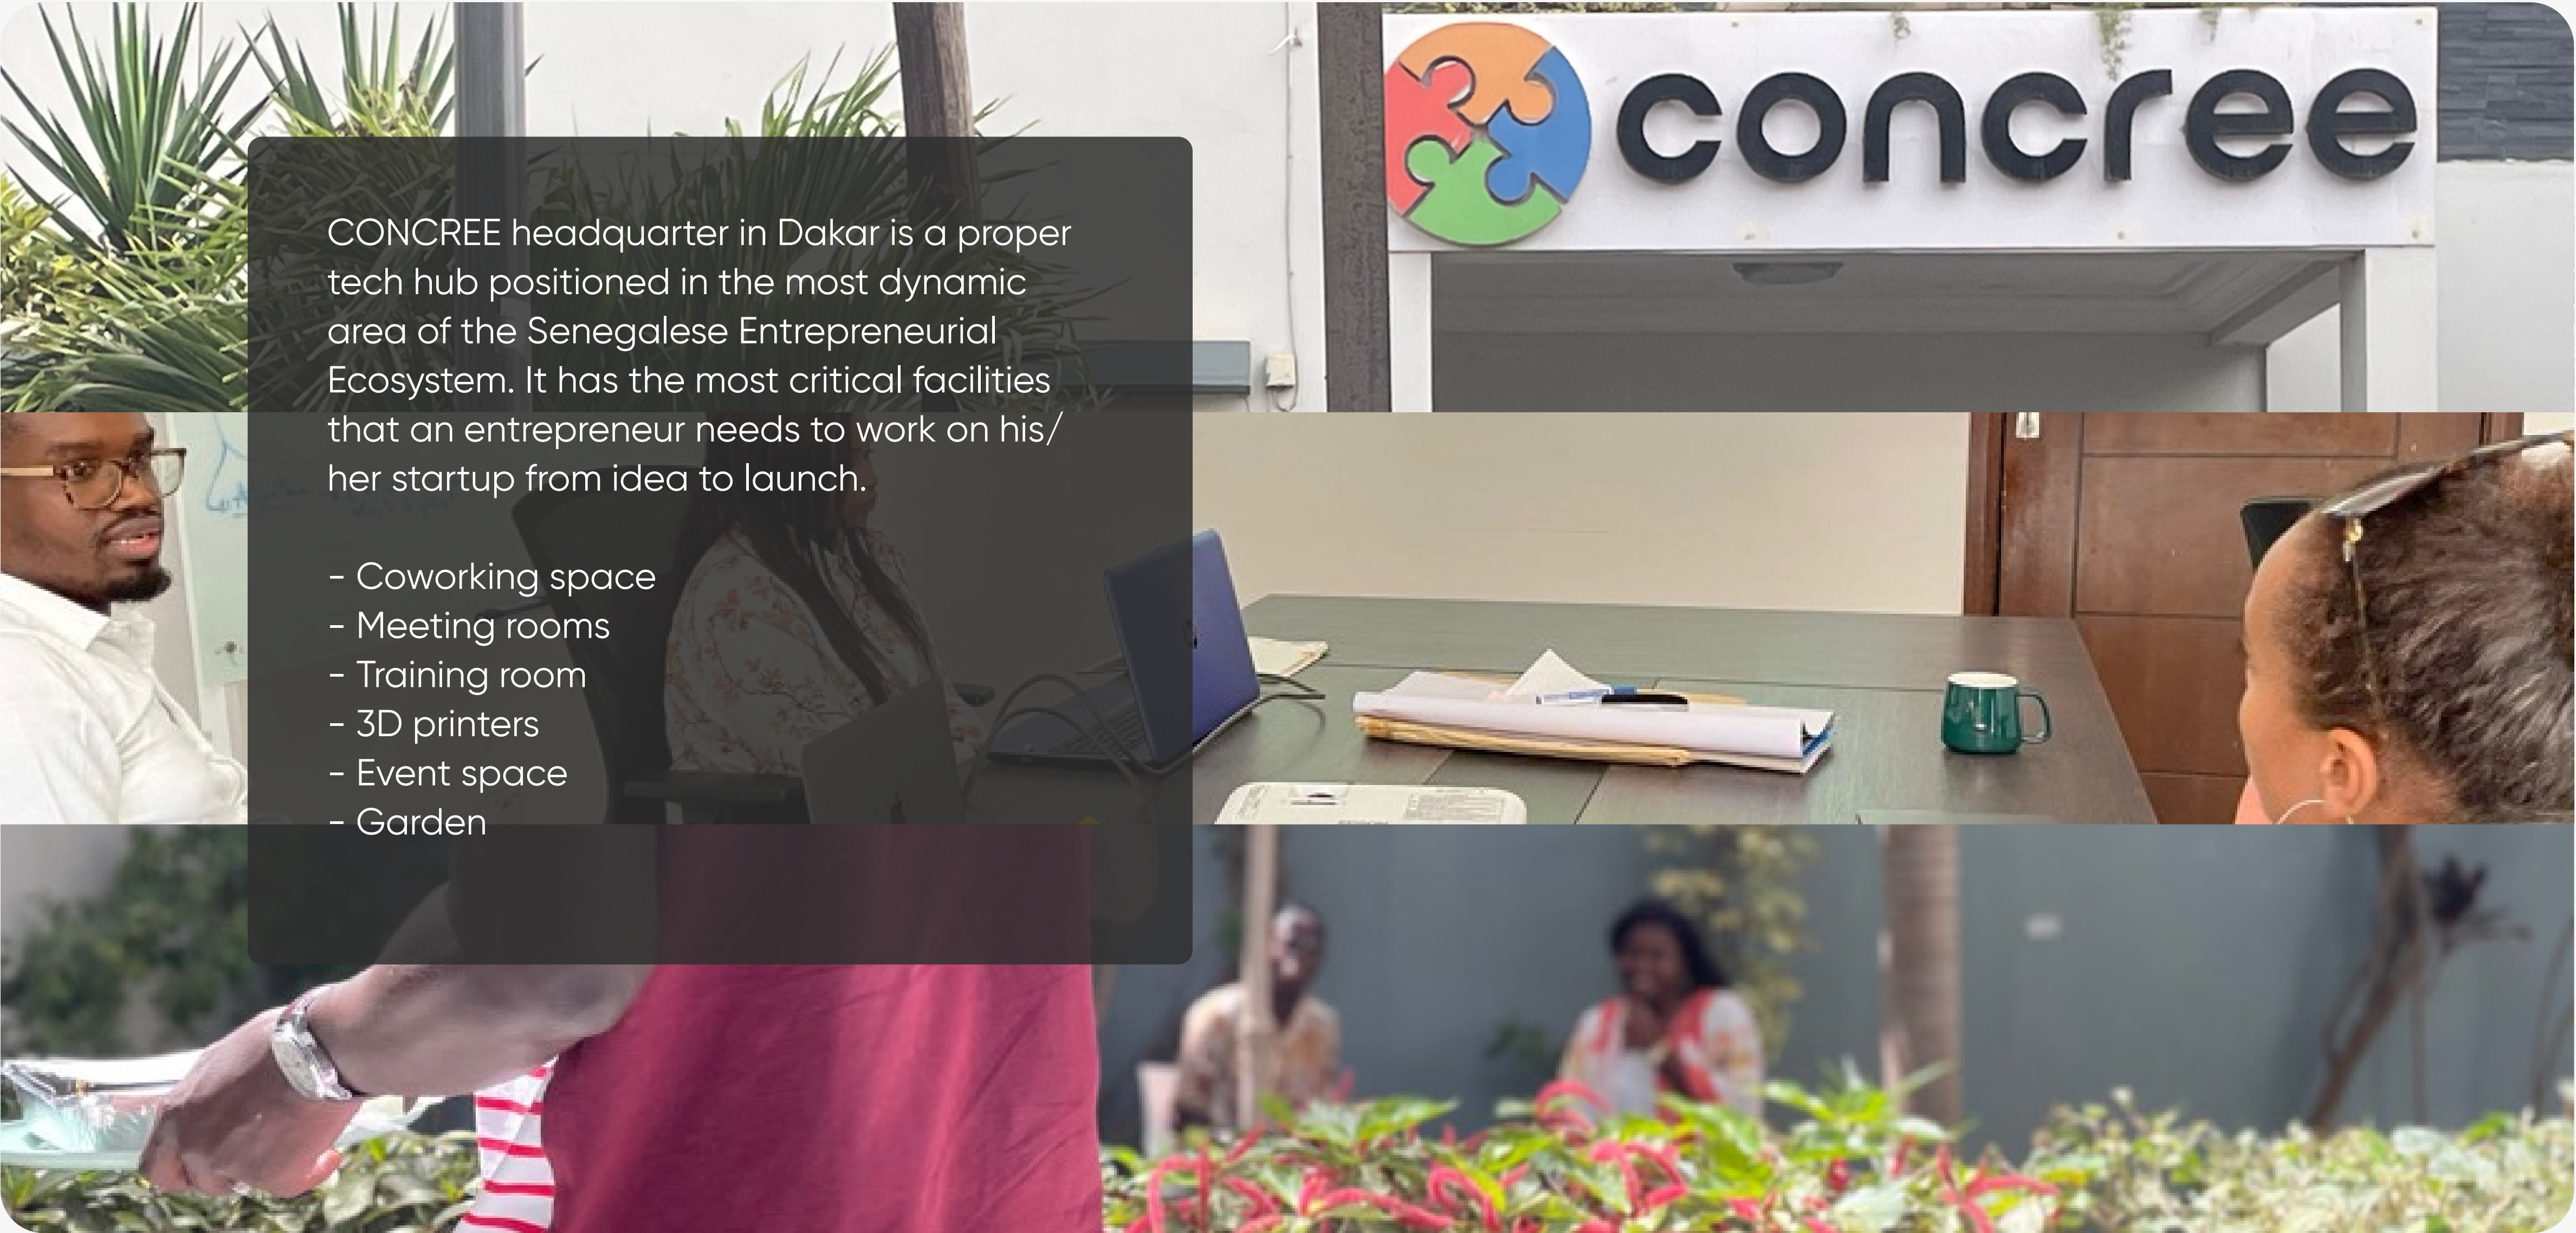

The ever growing number of entrepreneurs and organizations seeking CONCREE support services require us to constantly develop our team. In order to remain consistent in the quality of our services, we have produced a 100 page entrepreneur support guide as part of our knowledge management strategy.

Objective and Key Result (OKR)

Our team is keen one key element: focusing every single effort from every member of the team on consistently helping entrepreneurs make progress, in a sustainable way and at scale. We have adopted OKR methodology to do so. This experience has proved to be tremendously valuable to our entrepreneur support system.

The HUB

CONCREE headquarter in Dakar is a proper tech hub positioned in the most dynamic area of the Senegalese Entrepreneurial Ecosystem. It has the most critical facilities that an entrepreneur needs to work on his/her startup from idea to launch.

- Coworking space
- Meeting rooms
- Training room
- 3D printers
- Event space
- Garden
